SERVICE MANUAL**

FOREWORD

This Supplementary Service Manual has been prepared to introduce new service and data for the YZF-R6T/YZF-R6TC. For complete service information procedures it is necessary to use this Supplementary Service Manual together with the following manual.

NOTICE

This manual was produced by the Yamaha Motor Company, Ltd. primarily for use by Yamaha dealers and their qualified mechanics. It is not possible to include all the knowledge of a mechanic in one manual. Therefore, anyone who uses this book to perform maintenance and repairs on Yamaha vehicles should have a basic understanding of mechanics and the techniques to repair these types of vehicles. Repair and maintenance work attempted by anyone without this knowledge is likely to render the vehicle unsafe and unfit for use.

This model has been designed and manufactured to perform within certain specifications in regard to performance and emissions. Proper service with the correct tools is necessary to ensure that the vehicle will operate as designed. If there is any question about a service procedure, it is imperative that you contact a Yamaha dealer for any service information changes that apply to this model. This policy is intended to provide the customer with the most satisfaction from his vehicle and to conform to federal environmental quality objectives.

Yamaha Motor Company, Ltd. is continually striving to improve all of its models. Modifications and significant changes in specifications or procedures will be forwarded to all authorized Yamaha dealers and will appear in future editions of this manual where applicable.

NOTE:

- This Service Manual contains information regarding periodic maintenance to the emission control system. Please read this material carefully.
- Designs and specifications are subject to change without notice.

IMPORTANT MANUAL INFORMATION

Particularly important information is distinguished in this manual by the following.

The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

Failure to follow WARNING instructions could result in severe injury or death to the motorcycle operator, a bystander or a person checking or repairing the motorcycle.

CAUTION:

A CAUTION indicates special precautions that must be taken to avoid damage to the motorcycle.

NOTE:

A NOTE provides key information to make procedures easier or clearer.

HOW TO USE THIS MANUAL

This manual is intended as a handy, easy-to-read reference book for the mechanic. Comprehensive explanations of all installation, removal, disassembly, assembly, repair and check procedures are laid out with the individual steps in sequential order.

- ① The manual is divided into chapters. An abbreviation and symbol in the upper right corner of each page indicate the current chapter.
Refer to "SYMBOLS".
- ② Each chapter is divided into sections. The current section title is shown at the top of each page, except in Chapter 3 ("PERIODIC CHECKS AND ADJUSTMENTS"), where the sub-section title(s) appears.
- ③ Sub-section titles appear in smaller print than the section title.
- ④ To help identify parts and clarify procedure steps, there are exploded diagrams at the start of each removal and disassembly section.
- ⑤ Numbers are given in the order of the jobs in the exploded diagram. A circled number indicates a disassembly step.
- ⑥ Symbols indicate parts to be lubricated or replaced.
Refer to "SYMBOLS".
- ⑦ A job instruction chart accompanies the exploded diagram, providing the order of jobs, names of parts, notes in jobs, etc.
- ⑧ Jobs requiring more information (such as special tools and technical data) are described sequentially.

Order	Job/Part	Q'ty	Remarks
1	Removing the clutch cover Bottom cowling Right side cowling Engine oil		Removing the parts in the order listed. Refer to "COWLING" in chapter 3.
2	Coolant		Drain. Refer to "CHANGING THE ENGINE OIL" in chapter 3.
3	Coolant	1	Drain. Refer to "CHANGING THE COOLANT" in chapter 3.
4	Clutch cable	1	Disconnect.
5	Clutch cover	1	Disconnect.
6	Clutch cover gasket	1	
7	Dowel pin	2	For installation, reverse the removal procedure.

CLUTCH ENG

REMOVING THE CLUTCH

1. Remove:
 - clutch cover ①
 - gasket

NOTE:
Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern.
After all of the bolts are fully loosened, remove them.

2. Remove:
 - compression spring bolts ①
 - compression springs
 - pressure plate ②
 - pull rod ③
 - friction plates
 - clutch plates

3. Straighten the lock washer tab.

4. Loosen:

- clutch bass nut ①

NOTE:
While holding the clutch boss ② with the universal clutch holder, loosen the clutch bass nut.

5. Remove:

- clutch boss nut ①
- lock washer ②
- clutch boss ③
- thrust plate ④

CHECKING THE FRICTION PLATES
The following procedure applies to all of the friction plates.
1. Check:

- friction plate

Damage/wear → Replace the friction plates as a set.

SYMBOLS

The following symbols are not relevant to every vehicle.

Symbols ① to ⑨ indicate the subject of each chapter.

- ① General information
- ② Specifications
- ③ Periodic checks and adjustments
- ④ Chassis
- ⑤ Engine
- ⑥ Cooling system
- ⑦ Fuel injection system
- ⑧ Electrical system
- ⑨ Troubleshooting

Symbols ⑩ to ⑯ indicate the following.

- ⑩ Serviceable with engine mounted
- ⑪ Filling fluid
- ⑫ Lubricant
- ⑬ Special tool
- ⑭ Tightening torque
- ⑮ Wear limit, clearance
- ⑯ Engine speed
- ⑰ Electrical data

Symbols ⑯ to ㉓ in the exploded diagrams indicate the types of lubricants and lubrication points.

- ⑯ Engine oil
- ⑰ Gear oil
- ㉑ Molybdenum-disulfide oil
- ㉒ Wheel-bearing grease
- ㉓ Lithium-soap-based grease
- ㉔ Molybdenum-disulfide grease

Symbols ㉕ to ㉖ in the exploded diagrams indicate the following.

- ㉕ Apply locking agent (LOCTITE®)
- ㉖ Replace the part

GENERAL INFORMATION

SPECIAL TOOLS

The following special tools are necessary for complete and accurate tune-up and assembly. Use only the appropriate special tools as this will help prevent damage caused by the use of inappropriate tools or improvised techniques. Special tools, part numbers or both may differ depending on the country. When placing an order, refer to the list provided below to avoid any mistakes.

NOTE:

- For U.S.A. and Canada, use part number starting with "YM-", "YU-", or "ACC-".
- For others, use part number starting with "90890-".

Tool No.	Tool name/Function	Illustration
90890-01423 YM-01423	Damper rod holder This tool is used to hold the damper rod assembly when loosening or tightening the damper rod assembly bolt.	
90890-01434 YM-01434	Rod holder This tool is used to support the damper adjusting rod.	
90890-01441 YM-01441	Fork spring compressor This tool is used to disassemble or assemble the front fork legs.	
90890-01442 YM-01442	Fork seal driver This tool is used to install the front fork's oil seal and dust seal.

NOTE:

1. Insert the front wheel axle from the right side and tighten it with the flange bolt from the left side to 91 Nm (9.1 m•kg, 66 ft•lb).
2. In the order from the pinch bolt ② → pinch bolt ① → pinch bolt ②, tighten each bolt to 21 Nm (2.1 m•kg, 15 ft•lb) without performing temporary tightening.
3. Check that the end face of the axle head and the end face of the fork side are flush-mounted. If they are out of alignment, make sure to fit them by adding the external force by hand or with a plastic hammer, etc. If the end face of the axle is not parallel to the end face of the fork, align them so that one point of the axle circumference is positioned on the end face of the fork. At this stage, it can be accepted if the end face of the axle becomes partially concave to the end face of the fork.
4. In the order from the pinch bolt ④ → pinch bolt ③ → pinch bolt ④, tighten each bolt to 21 Nm (2.1 m•kg, 15 ft•lb) without performing temporary tightening.

CABLE ROUTING

- ① Right handlebar switch lead
- ② Clutch cable
- ③ Main switch lead
- ④ Left handlebar switch lead
- ⑤ Throttle cable (return side)
- ⑥ Throttle cable (pull side)
- ⑦ Horn lead
- ⑧ Steering cover
- ⑨ Front brake hose
- ⑩ Throttle cables
- ⑪ Joint

- [A] Pass the right handlebar switch lead inside the front brake hoses and over the throttle cables.
- [B] Install the throttle cables to the hook so that the pulling side of the throttle cables is routed downward.
- [C] Pass the clutch cable through the guide.
- [D] Plastic locking tie shall be positioned at 15 mm (0.59 in) below from the upper bracket.
- [E] Clamp the left handlebar switch lead to the front fork with the plastic locking tie and cut the tip of the tie. Clamp it to the protector section.
- [F] Clamping position should be 10 mm (0.39 in) or lower from the top end of the under bracket.
- [G] Attach the horn lead to the hook on the steering cover.

- H** Clamp it at the position of 50 mm (1.97 in) to 65 mm (2.56 in) from the upper face of the under bracket with the plastic locking tie. Cut the surplus part of the clamp tip leaving 2 mm (0.08 in) to 4 mm (0.16 in). Point the tip of the clamp to the outside of vehicle.
- I** Pass the throttle cables inside the front brake hoses.
- J** Set in the coupler between the headlight's hollow section and the duct.
- K** To the wire harness
- L** To the front turn signal light (right)
- M** Set the sub wire harness in the joint.
- N** Do not catch the sub wire harness when the duct is assembled.
- O** To the front turn signal light (left)
- P** Install the relay to the rib of the headlight. (Location for the left and right relays is alternative.)
- Q** Point the tip of the plastic locking tie to the front side of the vehicle. Cut the tip leaving 2 ~ 10 mm (0.08 ~ 0.39 in).
- R** Point the tip of the plastic locking tie to the outside of the vehicle. Cut the tip leaving 2 ~ 10 mm (0.08 ~ 0.39 in).
- S** Attach the horn lead pointing to the front side of the vehicle.

- ① Throttle stop screw
- ② Coolant reservoir tank hose
- ③ Cover 8
- ④ Radiator fan motor lead (right)
- ⑤ Pickup coil lead
- ⑥ Rear tail/brake light switch lead
- ⑦ Radiator return hose
- ⑧ Coolant hose
- ⑨ Clutch cable
- ⑩ Coolant hose protector
- ⑪ Hose clamp assembly
- ⑫ Hose clamp

A Pass the rear tail/brake light switch lead outside of rear engine mount bolt.

- B** Pass the ignition coil lead outside of the radiator hose.
- C** Pass the coolant reservoir tank hose under the frame and right side of the throttle body.
- D** The tip of the clamp should be pointed to the inside above the vehicle. Items to be clamped here are the radiator fan motor lead (right), coolant reservoir tank hose and radiator return hoses (2 hoses).
- E** Coupler should be placed within the shaded area of the cover 8. (Extrusion below the shaded area is prohibited.)
- F** Radiator fan motor lead (right) should be entered into the inside of the vehicle through the frame hole.
- G** Clamp the clutch cable.

- [H] Route the radiator fan motor lead (right) by the outside of the clutch cable.
- [I] Route the radiator fan motor lead (right) and clutch cable by the inner side of the coolant reservoir tank hose and radiator return hoses (2 hoses).
- [J] The punch mark starting point should be lower than the clamp's top end.
However, the aiming position of the punch mark starting point should be 5 mm (0.20 in) below the clamp's bottom end.
- [K] Pass the clutch cable inside of the radiator hose.
- [L] Assemble as “(a)” shown below when clamping.
- [M] Pass the pickup coil lead over the throttle stop cable.
- [N] Tip of the plastic locking tie shall be pointed to the inner side at the rear part of the vehicle.
- [O] Clamp the clutch cable so that it is positioned in this range.
- [P] Put and apply the hose clamp to it.
- [Q] Clamp the clutch cable by routing the upper end of the clamp along with the bottom end of the hose clamp assembly.

- ① Throttle cable (return side)
- ② Throttle cable (pull side)
- ③ Starter motor lead
- ④ Canister hose (for CAL)
- ⑤ Canister (for CAL)
- ⑥ Balance hose (for CAL)
- ⑦ Coolant reservoir tank breather hose
- ⑧ Bracket 2
- ⑨ Sidestand switch lead
- ⑩ Oil level switch lead
- ⑪ A.C. magneto lead
- ⑫ Radiator fan motor lead (left)
- ⑬ Fuel tank breather hose
- ⑭ Fuel tank drain hose
- ⑮ Coolant reservoir tank cover
- ⑯ Drive sprocket cover
- ⑰ Coolant reservoir tank

- [A] Pass the main switch lead under the left handlebar switch lead and then to the right side of the vehicle.
- [B] Pass the throttle stop cable by the left side of the side stand switch lead, oil level switch lead, A.C. magneto lead and then to the right side of the vehicle.
- [C] Route the A.C. magneto lead, sidestand switch lead and oil level switch lead so that they pass the inner side of the balance pipe 3. (for CAL)
- [D] Pass the fuel tank drain hose and fuel tank breather hose inside of the coolant reservoir tank breather hose, coolant reservoir tank hose and wire harness and then route it by the out side of the starter motor lead.
- [E] Pass the coolant reservoir tank hose outside of the fuel tank drain hose and fuel tank breather hose.

- [F] Pass the fuel tank drain hose, fuel tank breather hose through the clamp of the coolant reservoir tank.
- [G] Pass the coolant reservoir tank breather hose through the clamp of under the coolant reservoir tank.
- [H] Projection allowance from the coolant reservoir tank cover shall be 30 to 50 mm (1.18 ~ 1.97 in).
- [I] Pass the oil level switch lead and sidestand switch lead over the bracket 2.
- [J] Pass the oil level switch lead, and sidestand switch lead through the clamp.
- [K] 5 ~ 45 mm (0.20 ~ 1.77 in).
- [L] Clamp the A.C. magneto lead, oil level switch lead and sidestand switch lead.
- [M] Pass the sidestand switch lead, oil level switch lead and A.C. magneto lead between the engine stay and the engine.
- [N] To the throttle body
- [O] To the radiator fan motor relay and fuse box
- [P] Route the radiator fan motor lead (left) by the outside of the radiator inlet hose.
- [Q] Pass the throttle cable between the guide of the cover 2 and the frame.
- [R] Pass the radiator fan motor lead (left) through the hole of the frame to the inner side of the vehicle.
- [S] To the horn
- [T] Pass the coolant reservoir tank breather hose through the hole of the coolant reservoir tank cover.
- [U] Order of ups and downs means no object.
- [V] Route it below the coolant reservoir tank.

A To the headlight

B Make sure not to drop the headlight sub wire harness beneath the projection of the duct. Check it when installing the side cowling.

C Clamp the plastic locking tie to the cover 8. Place the coupler at the rear side of the vehicle against the plastic locking tie. Point the tip of the plastic locking tie to the downward in the inner side of the vehicle.

D Route the headlight and meter leads under the frame's lower part from the hollow section of the cover 2.

E Pass the left and right handlebar switch leads outside of the air filter case air vent hose.

F Connect the couplers (4 units) at the frame side hole. Do not catch each lead and wire harness when the cover 8 is attached.

G From the radiator

H Pass the coolant reservoir tank hose through forward the starter motor lead and speed sensor lead.

I Pass the speed sensor lead coupler and crank-shaft position sensor lead coupler over the throttle stop cable.

- [J] Pass the fuel tank breather hose and fuel tank drain hose over the fuel hose and fuel return hose. One rotation is possible for a twist of fuel tank breather hose and fuel tank drain hose before an engine clamp.
- [K] To the rear tail/brake light switch lead.
- [L] To the neutral switch
- [M] Insert the wire harness wrapping clamp to the frame hole.
- [N] Pass the battery negative lead over the wire harness.
- [O] To the engine. Upper or lower position relation against the heat protector is no object.
- [P] There should be no interference between the wire harness and the tip of the rear frame attaching bolts.
- [Q] To the coolant reservoir tank
- [R] To the intake air temperature sensor (air filter case)
- [S] To the oil level switch, sidestand switch and A.C. magneto
- [T] Install the wire harness wrapping clamp to the stay of the throttle body.
- [U] Pass the wire harness over the throttle air vent hose.
- [V] Pass the wire harness between frame and coolant hose.
- [W] Pass it through the frame hole.
- [X] Route the main switch lead under the left handlebar switch lead and radiator fan motor lead (right).

- | | |
|--|--|
| <input checked="" type="checkbox"/> Y Upper or lower position relation between the left handlebar switch lead, right handlebar switch lead and radiator fan motor lead (right) is no object.
<input checked="" type="checkbox"/> Z Do not catch the coupler when the air filter case is assembled.
AA Clamp the wire harness, left handlebar switch lead, right handlebar switch lead, main switch lead and radiator fan motor lead (right). Match the taping positions of three leads except the wire harness. Point the tip of the clamp to the front side of the vehicle.
AB Sealing set of the cover can be either upper or lower against the frame lower end. However, it should not be caught.
AC To the main switch lead coupler | AD Point the tip of the plastic locking tie to the rear side of the vehicle.
AE To the fuse box and fan motor relay
AF Pass the throttle cables over the cover 2.
AG Branching leads to the fuse box and radiator fan motor relay shall pass through the guide section of the cover 2 under the wire harness and then to the outside of the frame.
AH Clamp the wire harness, main switch lead branch line, radiator fan motor lead (left), radiator fan motor lead (right).
AI Tip of the plastic locking tie should point to the downward outside of the vehicle.
AJ Branching harness from the wire harness.
AK Use the plastic locking tie to clamp the starter motor lead at the protector section |
|--|--|

- AL** The clamp by the side of a hose comes below an attachment clamp.
- AM** Insert until it sets.
- AN** Pass the canister hose over fuel return hose and under the fuel hose.
- AO** Route it above the canister hose.

- [A] Push the starter motor lead in the clamping sections (two points) or the battery box assembly and secure it.
- [B] Install to the deepest position of the rib of the battery box assembly.
- [C] Fit in the plastic cover of rivet to the main unit after assembly.
- [D] Make sure to clamp the wire harness. (Tighten it until the clamp latchet stops.)
- [E] Insert the turn signal light relay to the back end of the rib in the battery box assembly.
- [F] Hook of the battery box assembly shall hook on the upper face of the fuse box. (It should not be put on the side face.)
- [G] Set the immobilizer unit couplers (two units) in the right side space of the tool kit.

- [H] Insert it to the back end of the rib in the battery box assembly.
- [P] Route the tail/brake light lead above the projection part.
- [I] The 20 mm (0.79 in) knob should be within this range.
- [Q] There should be no remarkable difference between the tension on right and left bands.
- [J] Pass the turn signal lead by the outside of the right side attaching boss of the tail/brake light.
- [R] Point the tool kit opening to the rear side of the vehicle.
- [K] Connect the turn signal light lead couplers (two leads).
- [S] Connect the tail/brake light lead coupler.

PERIODIC CHECKS AND ADJUSTMENTS

BLEEDING THE HYDRAULIC BRAKE SYSTEM

WARNING

Bleed the hydraulic brake system whenever:

- the system is disassembled.
 - a brake hose is loosened, disconnected or replaced.
 - the brake fluid level is very low.
 - brake operation is faulty.

NOTE: _____

- Be careful not to spill any brake fluid or allow the brake fluid reservoir to overflow.
 - When bleeding the hydraulic brake system, make sure there is always enough brake fluid before applying the brake. Ignoring this precaution could allow air to enter the hydraulic brake system, considerably lengthening the bleeding procedure.
 - If bleeding is difficult, it may be necessary to let the brake fluid settle for a few hours. Repeat the bleeding procedure when the tiny bubbles in the hose have disappeared.

1. Bleed:

- hydraulic brake system

- a. Fill the brake fluid reservoir to the proper level with the recommended brake fluid.
 - b. Install the brake fluid reservoir diaphragm.
 - c. Connect a clear plastic hose ① tightly to the bleed screw ②.

A Front brake master cylinder

B Front brake caliper

C Rear brake caliper

NOTE:

Bleeding order of the front hydraulic brake system is the following order:

1. front brake master cylinder.
 2. front brake calipers.
 3. front brake master cylinder.

- d. Place the other end of the hose into a container.
 - e. Slowly apply the brake several times.

BLEEDING THE HYDRAULIC BRAKE SYSTEM

CHK
ADJ

- f. Fully pull the brake lever or fully press down the brake pedal and hold it in position.
- g. Loosen the bleed screw.

NOTE: _____

Loosening the bleed screw will release the pressure and cause the brake lever to contact the throttle grip or the brake pedal to fully extend.

- h. Tighten the bleed screw and then release the brake lever or brake pedal.
- i. Repeat steps (e) to (h) until all of the air bubbles have disappeared from the brake fluid in the plastic hose.
- j. Tighten the bleed screw to specification.

Bleed screw

6 Nm (0.6 m•kg, 4.3 ft•lb)

- k. Fill the brake fluid reservoir to the proper level with the recommended brake fluid. Refer to "CHECKING THE BRAKE FLUID LEVEL".

⚠ WARNING _____

After bleeding the hydraulic brake system, check the brake operation.

▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲▲

NOTE: _____

After bleeding air, the brake fluid may ooze around the thread section of each bleed screw. This phenomenon does not show the leakage but the brake fluid that has been accumulated in the thread of screw while bleeding air. Please wipe off to make the parts clean.

ADJUSTING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

⚠️ WARNING

- Always adjust both front fork legs evenly. Uneven adjustment can result in poor handling and loss of stability.
 - Securely support the motorcycle so that there is no danger of it falling over.

Spring preload

CAUTION:

- Grooves are provided to indicate the adjustment position.
 - Never go beyond the maximum or minimum adjustment positions.

1. Adjust:

- spring preload

- a. Turn the adjusting bolt ① in direction (a) or (b).

Direction (a)	Spring preload is increased (suspension is harder).
Direction (b)	Spring preload is decreased (suspension is softer).

Adjusting positions

Minimum: 8

Standard: 7

Maximum: 0

ASSEMBLING AND INSTALLING THE FRONT BRAKE MASTER CYLINDER

WARNING

- Before installation, all internal brake components should be cleaned and lubricated with clean or new brake fluid.
- Never use solvents on internal brake components.

Recommended brake fluid
DOT 4

1. Install:

- brake master cylinder kit
- circlip **New**
- dust boot

2. Install:

- brake master cylinder ①

13 Nm (1.3 m•kg, 9.4 ft•lb)

NOTE:

- Install the brake master cylinder holder with the "UP" mark ② facing up.
- Align the mating surfaces of the brake master cylinder holder with the punch mark ③ on the right handlebar.
- First, tighten the upper bolt, then the lower bolt. Attach the brake master cylinder to the vehicles inner side from a punch mark.

3. Install:

- copper washers **New**
- brake hose
- union bolt  30 Nm (3.0 m•kg, 22 ft•lb)
- tail/brake light switch coupler

WARNING

Proper brake hose routing is essential to insure safe motorcycle operation. Refer to "CABLE ROUTING".

NOTE:

- While holding the brake hose, tighten the union bolt as shown.
- Turn the handlebars to the left and right to make sure the brake hose does not touch other parts (e.g., wire harness, cables, leads). Correct if necessary.

4. Fill:

- brake fluid reservoir
(with the specified amount of the recommended brake fluid)

**Recommended brake fluid
DOT 4**

⚠ WARNING

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

CAUTION:

Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.

5. Bleed:

- brake system
Refer to "BLEEDING THE HYDRAULIC BRAKE SYSTEM".

6. Check:

- brake fluid level
Below the minimum level mark  → Add the recommended brake fluid to the proper level.
Refer to "CHECKING THE BRAKE FLUID LEVEL" in chapter 3.

7. Check:

- brake lever operation
Soft or spongy feeling → Bleed the brake system.

CHECKING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

1. Check:

- inner tube (1)
 - outer tube (2)
- Bends/damage/scratches → Replace.

WARNING
Do not attempt to straighten a bent inner tube as this may dangerously weaken it.

2. Measure:

- spring free length (a)
- Out of specification → Replace.

Spring free length
248.8 mm (9.80 in)

3. Check:

- damper rod (1)
- Damage/wear → Replace.
Obstruction → Blow out all of the oil passages with compressed air.
- damper rod adjusting rod
- Bends/damage → Replace.

**CAUTION:**

- The front fork leg has a built-in damper adjusting rod and a very sophisticated internal construction, which are particularly sensitive to foreign material.
- When disassembling and assembling the front fork leg, do not allow any foreign material to enter the front fork.

4. Check:

- cap bolt O-ring ①

ASSEMBLING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

⚠ WARNING

- Make sure the oil levels in both front fork legs are equal.
- Uneven oil levels can result in poor handling and a loss of stability.

NOTE:

- When assembling the front fork leg, be sure to replace the following parts:
 - outer tube bushing
 - oil seal
 - dust seal
- Before assembling the front fork leg, make sure all of the components are clean.

1. Install:

- inner tube ①
- damper rod assembly ②
- damper rod assembly bolt
- copper washer New

**WARNING**

Always use new copper washer.

CAUTION:

Allow the damper rod assembly to slide slowly down the inner tube ① until it protrudes from the bottom of the inner tube. Be careful not to damage the inner tube.

2. Lubricate:

- inner tube's outer surface

Recommended lubricant
Suspension oil "01" or equivalent

3. Tighten:

NOTE:

- While filling the front fork leg, keep it upright.
- After filling, slowly pump the front fork leg up and down to distribute the fork oil.

10. Install:

- nut ①
- fork spring ②
- spacer ③
- damper adjusting rod ④
- cap bolt ⑤

- a. Remove the rod puller and adapter.
- b. Install the nut.
- c. Install the fork spring, and spacer.
- d. Install the rod puller and adapter.

NOTE:

Install the spring with the smaller pitch ⑩ facing up ⑪.

SWINGARM AND DRIVE CHAIN

CHECKING THE DRIVE CHAIN

1. Measure:

- Measure the dimension between 15-links on the inner side (a) and outer side (b) of the roller and calculate the dimension between pin centers.
 - Dimension (c) between pin centers = (Inner dimension (a) + Outer dimension (b))/2
 - 15-link section (c) of the drive chain
Out of specification → Replace the drive chain, front drive sprocket and rear drive sprocket as a set.

**15-link drive chain section limit
(maximum)**
239.3 mm (9.42 in)

NOTE-

- While measuring the 15-link section, push down on the drive chain to increase its tension.
 - Perform this measurement at two or three different places.

2. Check:

- drive chain
Stiffness → Clean and lubricate or replace.

3. Clean:

- drive chain

- a. Wipe the drive chain with a clean cloth.
 - b. Put the drive chain in kerosene and remove any remaining dirt.
 - c. Remove the drive chain from the kerosene and completely dry it.

**CAUTION:**

This motorcycle has a drive chain with small rubber O-rings ① between the drive chain side plates. Never use high-pressure water or air, steam, gasoline, certain solvents (e.g., benzine), or a coarse brush to clean the drive chain. High-pressure methods could force dirt or water into the drive chain's internals, and solvents will deteriorate the O-rings. A coarse brush can also damage the O-rings. Therefore, use only kerosine to clean the drive chain.

4. Check:

- O-rings ①
Damage → Replace the drive chain.
- drive chain rollers ②
Damage/wear → Replace the drive chain.
- drive chain side plates ③
Damage/wear → Replace the drive chain.
Cracks → Replace the drive chain and make sure that the battery breather hose is properly routed away from the drive chain and below the swingarm.

5. Lubricate:

- drive chain

Recommended lubricant
Engine oil or chain lubricant
suitable for O-ring chains

6. Check:

- drive sprocket
- rear wheel sprocket
More than 1/4 tooth ② wear → Replace the drive chain sprockets as a set.
Bent teeth → Replace the drive chain sprockets as a set.
- ③ Correct
- ① Drive chain roller
- ② Drive chain sprocket

- Handle the coolant temperature sensor with special care.
- Never subject the coolant temperature sensor to strong shocks. If the coolant temperature sensor is dropped, replace it.

**Coolant temperature sensor** $20 \text{ Nm} (2.0 \text{ m}\cdot\text{kg}, 14 \text{ ft}\cdot\text{lb})$

Three bond sealock® 10

- Does the coolant temperature sensor operate properly?

YES

NO

Replace the coolant temperature sensor.

EAS00813

7. Wiring

- Check the entire cooling system's wiring. Refer to "CIRCUIT DIAGRAM".
- Is the cooling system's wiring properly connected and without defects?

YES

NO

This circuit is OK.

Properly connect or repair the cooling system's wiring.

**SUPPLEMENTARY
SERVICE MANUAL**

FOREWORD

This Supplementary Service Manual has been prepared to introduce new service and data for the YZF-R6S/YZF-R6SC. For complete service information procedures it is necessary to use this Supplementary Service Manual together with the following manual.

YZF-R6R/YZF-R6SR/YZF-R6RC/YZF-R6SRC SERVICE MANUAL: LIT-11616-16-45 (5SL-28197-10)

Any reproduction or unauthorized use without the written permission of Yamaha Motor Corporation, U.S.A. is expressly prohibited. Printed in U.S.A. P/N LIT-11616-17-46</p>

NOTICE

This manual was produced by the Yamaha Motor Company, Ltd. primarily for use by Yamaha dealers and their qualified mechanics. It is not possible to include all the knowledge of a mechanic in one manual. Therefore, anyone who uses this book to perform maintenance and repairs on Yamaha vehicles should have a basic understanding of mechanics and the techniques to repair these types of vehicles. Repair and maintenance work attempted by anyone without this knowledge is likely to render the vehicle unsafe and unfit for use.

This model has been designed and manufactured to perform within certain specifications in regard to performance and emissions. Proper service with the correct tools is necessary to ensure that the vehicle will operate as designed. If there is any question about a service procedure, it is imperative that you contact a Yamaha dealer for any service information changes that apply to this model. This policy is intended to provide the customer with the most satisfaction from his vehicle and to conform to federal environmental quality objectives.

Yamaha Motor Company, Ltd. is continually striving to improve all of its models. Modifications and significant changes in specifications or procedures will be forwarded to all authorized Yamaha dealers and will appear in future editions of this manual where applicable.

NOTE:

- This Service Manual contains information regarding periodic maintenance to the emission control system. Please read this material carefully.
- Designs and specifications are subject to change without notice.

IMPORTANT MANUAL INFORMATION

Particularly important information is distinguished in this manual by the following.

The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

Failure to follow WARNING instructions could result in severe injury or death to the motorcycle operator, a bystander or a person checking or repairing the motorcycle.

CAUTION:

A CAUTION indicates special precautions that must be taken to avoid damage to the motorcycle.

NOTE:

A NOTE provides key information to make procedures easier or clearer.

HOW TO USE THIS MANUAL

This manual is intended as a handy, easy-to-read reference book for the mechanic. Comprehensive explanations of all installation, removal, disassembly, assembly, repair and check procedures are laid out with the individual steps in sequential order.

- ① The manual is divided into chapters. An abbreviation and symbol in the upper right corner of each page indicate the current chapter.
Refer to "SYMBOLS".
- ② Each chapter is divided into sections. The current section title is shown at the top of each page, except in Chapter 3 ("PERIODIC CHECKS AND ADJUSTMENTS"), where the sub-section title(s) appears.
- ③ Sub-section titles appear in smaller print than the section title.
- ④ To help identify parts and clarify procedure steps, there are exploded diagrams at the start of each removal and disassembly section.
- ⑤ Numbers are given in the order of the jobs in the exploded diagram. A circled number indicates a disassembly step.
- ⑥ Symbols indicate parts to be lubricated or replaced.
Refer to "SYMBOLS".
- ⑦ A job instruction chart accompanies the exploded diagram, providing the order of jobs, names of parts, notes in jobs, etc.
- ⑧ Jobs requiring more information (such as special tools and technical data) are described sequentially.

1. **REMOVING THE CLUTCH**

Remove:

- clutch cover ①
- gasket

NOTE:
Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern.
After all of the bolts are fully loosened, remove them.

2. Remove:

- compression spring bolts ①
- compression springs
- pressure plate ②
- pull rod ③
- friction plates
- clutch plates

NOTE:
While holding the clutch boss ② with the universal clutch holder, loosen the clutch boss nut.

3. Straighten the lock washer tab.

4. Loosen:

- clutch boss nut ①

CHECKING THE FRICTION PLATES
The following procedure applies to all of the friction plates.

- Check:
 - friction plate
Damage/wear → Replace the friction plates as a set.

- ③ Immobilizer unit lead, main switch lead and left handlebar switch lead
- ④ Throttle cable (return side)
- ⑤ Throttle cable (pull side)
- ⑥ Front brake hoses
- ⑦ Throttle cables
- ⑧ Joint
- ⑨ Under bracket

- A Pass the right handlebar switch lead inside the front brake hoses and over the throttle cables.
- B Install the throttle cables to the hook so that the pulling side of the throttle cables is routed downward.
- C Pass the clutch cable through the guide.
- D Plastic locking tie shall be positioned at 10 mm (0.39 in.) below from the upper bracket.
- E Clamp the left handlebar switch lead to the front fork with the plastic locking tie and cut the tip of the tie. Clamp it to the protector section.

- F** Pass the horn lead by the outside of the throttle cable and clamp it to the forefront of upper face of the under bracket. Next, route it under the front brake hose and clamp it to the pawl of the under cover.
- G** Clamp it at the position of 40 (1.57 in.) to 60 mm (2.36 in.) from the upper face of the under bracket with the plastic locking tie. Cut the surplus part of the clamp tip leaving 2 (0.08 in.) to 4 mm (0.16 in.). Point the tip of the clamp to the outside of vehicle.
- H** Pass the throttle cables inside the front brake hoses.
- I** Set in the coupler between the head light's hollow section and the duct.
- J** Install the relay to the rib of the head light. (Location for the left and right relays is alternative.)
- K** To the wire harness
- L** To the front turn signal light (right)
- M** Set the sub wire harness in the joint.
- N** Do not catch the sub wire harness when the duct is assembled.
- O** To the front turn signal light (left)
- P** Point the tip of the plastic locking tie to the front side of the vehicle. Cut the tip leaving 2 ~ 10 mm (0.08 ~ 0.39 in).
- Q** Point the tip of the plastic locking tie under the under bracket and rear side of the vehicle. Cut the tip leaving 2 ~ 10 mm (0.08 ~ 0.39 in).

- ② Coolant reservoir tank hose
- ③ Pickup coil lead
- ④ Rear brake light switch lead
- ⑤ Coolant hose
- ⑥ Clutch cable
- ⑦ Coolant hose protector
- ⑧ Hose clamp assembly
- ⑨ Hose clamp

- [A] Pass the rear brake light switch lead outside of rear engine mount bolt.
- [B] Pass the ignition coil lead outside of the radiator hose.
- [C] Pass the coolant reservoir tank hose under the frame and right side of the throttle body.

- [D] Pass the clutch cable inside of the coolant reservoir tank hose and radiator return hoses.
- [E] Assemble as “@” shown below when clamping.
- [F] Pass the pickup coil lead over the throttle stop cable.
- [G] Tip of the plastic locking tie shall be pointed to the inner side at the rear part of the vehicle.
- [H] The punch mark starting point should be lower than the clamp's top end.
However, the aiming position of the punch mark starting point should be 5 mm (0.20 in) below the clamp's bottom end.
- [I] Pass the clutch cable inside of the radiator hose.
- [J] Clamp the clutch cable so that it is positioned in this range.
- [K] Put and apply the hose clamp to it.

- [L] Clamp the clutch cable by routing the upper end of the clamp along with the bottom end of the hose clamp assembly.

- ① Throttle cable (return side)
- ② Throttle cable (pull side)

- ⑬ Drive sprocket cover
- ⑭ Coolant reservoir tank
- ⑮ Canister hose (for CAL)
- ⑯ Canister (for CAL)
- ⑰ Balance hose (for CAL)

- [A] Pass the main switch lead under the left handlebar switch lead and then to the right side of the vehicle.
- [B] Pass the throttle stop cable by the left side of the side stand switch lead, oil level switch lead, A.C. magneto lead and then to the right side of the vehicle.
- [C] Pass the fuel tank drain hose and fuel tank breather hose inside of the reservoir tank breather hose, reservoir tank hose and wire harness and then route it by the out side of the starter motor lead.
- [D] Pass the coolant reservoir tank hose outside of the fuel tank drain hose and fuel tank breather hose.
- [E] Pass the fuel tank drain hose, fuel tank breather hose through the clamp of the coolant reservoir tank.

- F** Pass the coolant reservoir tank breather hose through the clamp of under the coolant reservoir tank.
- G** Projection allowance from the coolant reservoir tank cover shall be 30 to 50 mm (1.18 ~ 1.97 in).
- H** Pass the oil level switch lead and sidestand switch lead over the bracket 2.
- I** Pass the oil level switch lead, and sidestand switch lead through the clamp.
- J** 5 ~ 45 mm (0.20 ~ 1.77 in).
- K** Clamp the A.C. magneto lead, oil level switch lead and sidestand switch lead.
- L** Pass the side stand switch lead, oil level switch lead and A.C. magneto lead between the engine stay and the engine.
- M** To the throttle body
- N** To the radiator fan motor relay and fuse box
- O** Route it above the radiator hose.
- P** Pass the throttle cable between the guide of the cover 2 and the frame.
- Q** Pass the radiator fan motor lead through the hole of the frame to the inner side of the vehicle.
- R** Pass the coolant reservoir tank breather hose through the hole of the coolant reservoir tank cover.
- S** Order of ups and downs means no object.
- T** Route it below the coolant reservoir tank.
- U** To the horn

CABLE ROUTING

SPEC

- [A] To the headlight
- [B] Make sure not to drop the headlight sub wire harness beneath the projection of the duct. Check it when installing the side cowling.
- [C] Clamp the plastic locking tie to the cover 8. Place the coupler at the rear side of the vehicle against the plastic locking tie. Point the tip of the plastic locking tie to the downward in the inner side of the vehicle.
- [D] Route the head light and meter leads under the frame's lower part from the hollow section of the cover 2.
- [E] Pass the left and right handlebar switch leads outside of the air filter case air vent hose.
- [F] Connect the couplers (4 units) at the frame side hole. Do not catch each lead and wire harness when the cover 8 is attached.
- [G] From the radiator
- [H] Pass the coolant reservoir tank hose through forward the starter motor lead and speed sensor lead.
- [I] Pass the speed sensor lead coupler and crankshaft position sensor lead coupler over the throttle stop cable.
- [J] Pass the fuel tank breather hose and fuel tank drain hose over the fuel hose and fuel return hose. One rotation is possible for a twist of fuel tank breather hose and fuel tank drain hose before an engine clamp.
- [K] To the rear brake light switch lead.

CABLE ROUTING

SPEC

- [L] To the neutral switch
- [M] Insert the wire harness wrapping clamp to the frame hole.
- [N] Pass the battery negative lead over the wire harness.
- [O] There should be no interference between the wire harness and the tip of the rear frame attaching bolts.
- [P] To the coolant reservoir tank
- [Q] To the intake air temperature sensor (air filter case)
- [R] To the oil level switch, sidestand switch and A.C. magneto
- [S] Install the wire harness wrapping clamp to the stay of the throttle body.
- [T] Pass the wire harness over the throttle air vent hose.
- [U] Pass the wire harness between frame and coolant hose.
- [V] Pass it through the frame hole.
- [W] Do not catch the coupler when the air filter case is assembled.
- [X] Clamp the wire harness, left and right handlebar switch leads and main switch lead. Align the tapping positions of three leads except the wire harness. Point the tip of the clamp to the front side of the vehicle.
- [Y] Sealing set of the cover can be either upper or lower against the frame lower end. However, it should not be caught.
- [Z] Clamp the wire harness, main switch lead branch section and radiator fan motor lead.

CABLE ROUTING

SPEC

- | | | | |
|-----------|---|-----------|---|
| AA | Branching leads to the fuse box and radiator fan motor relay shall pass through the guide section of the cover 2 under the wire harness and then to the outside of the frame. | AF | Tip of the plastic locking tie should point to the downward outside of the vehicle. |

NOTE: _____

- Do not damage the installation surfaces of the fuel tank when installing the fuel pump.
- Always use a new fuel pump gasket.
- Install the fuel pump as shown in the illustration.
- Tighten the fuel pump bolts in stages in a criss-cross pattern and to the specified torque.

EAS00737

TROUBLESHOOTING

The ignition system fails to operate (no spark or intermittent spark).

Check:

1. Main and ignition fuses
2. Battery
3. Spark plugs
4. Ignition spark gap
5. Ignition coil resistance
6. Crankshaft position sensor
7. Main switch
8. Engine stop switch

(of the entire ignition system)

NOTE:

- Before troubleshooting, remove the following part(s):
 1. seat
 2. fuel tank
 3. air filter case
 4. bottom cowling
 5. side cowlings
- Troubleshoot with the following special tool(s).

**Dynamic spark tester****YM-34487****Ignition checker****90890-06754****Pocket tester****90890-03112, YU-3112**

EAS00738

1. Main and ignition fuses

- Check the main and ignition fuses for continuity.
Refer to "CHECKING THE FUSES" in chapter 3.
- Are the main and ignition fuses OK?

YES

NO

Replace the fuse(s).

EAS00739

2. Battery

- Check the condition of the battery.
Refer to "CHECKING AND CHARGING THE BATTERY" in chapter 3.

**Minimum open-circuit voltage
12.8 V or more at 20°C (68°F)**

- Is the battery OK?

YES

NO

- Clean the battery terminals.
- Recharge or replace the battery.

EAS00741

3. Spark plugs

The following procedure applies to all of the spark plugs.

- Check the condition of the spark plug.
- Check the spark plug type.
- Measure the spark plug gap.
Refer to "CHECKING THE SPARK PLUGS" in chapter 3.

**Standard spark plug
CR9EK or CR10EK (NGK)**

**Spark plug gap
0.6 ~ 0.7 mm (0.0236 ~ 0.0276 in)**

- Is the spark plug in good condition, is it of the correct type, and is its gap within specification?

YES

NO

Re-gap or replace the spark plug.

EAS00743

4. Ignition spark gap

The following procedure applies to all of the spark plugs.

- Disconnect the spark plug cap from the spark plug.
- Connect the ignition checker ① and ignition coil ② as shown.
- Set the main switch to "ON".
- Measure the ignition spark gap ③.
- Crank the engine by pushing the starter switch and gradually increase the spark gap until a misfire occurs.

**Minimum ignition spark gap
6 mm (0.24 in)**

- Is there a spark and is the spark gap within specification?

NO

YES

The ignition system
is OK.

EAS00747

5. Ignition coil resistance

The following procedure applies to all of the ignition coils.

- Disconnect the ignition coil leads from the wire harness.
- Connect the pocket tester ($\Omega \times 1$) to the ignition coil as shown.

**Positive tester probe →
ignition coil terminal**
**Negative tester probe →
ignition coil terminal**

- Measure the primary coil resistance.

Primary coil resistance

0.24 ~ 0.32 Ω at 20°C (68°F)

- Connect the pocket tester ($\Omega \times 1k$) to the ignition coil as shown.

**Negative tester probe →
ignition coil terminal ①**

**Positive tester probe →
spark plug terminal ②**

- Measure the secondary coil resistance.

Secondary coil resistance

5.0 ~ 6.8 k Ω at 20°C (68°F)

- Is the ignition coil OK?

YES

NO

Replace the ignition
coil.

EAS00748

6. Crankshaft position sensor resistance

- Disconnect the crankshaft position sensor coupler from the wire harness.
- Connect the pocket tester ($\Omega \times 100$) to the crankshaft position sensor coupler as shown.

Positive tester probe → gray ①
Negative tester probe → black ②

- Measure the crankshaft position sensor resistance.

**Crankshaft position sensor resistance**

248 ~ 372 Ω at 20°C (68°F)
(between gray and black)

- Is the crankshaft position sensor OK?

↓ YES

↓ NO

Replace the crankshaft position sensor.

EAS00749

7. Main switch

- Check the main switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the main switch OK?

↓ YES

↓ NO

Replace the main switch.

EAS00750

8. Engine stop switch

- Check the engine stop switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the engine stop switch OK?

↓ YES

↓ NO

Replace the right handlebar switch.

EAS00751

9. Neutral switch

- Check the neutral switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the neutral switch OK?

↓ YES

↓ NO

Replace the neutral switch.

EAS00752

10. Sidestand switch

- Check the sidestand switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the sidestand switch OK?

↓ YES

↓ NO

Replace the side-stand switch.

EAS00763

11. Clutch switch

- Check the clutch switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the clutch switch OK?

↓ YES

↓ NO

Replace the clutch switch.

EAS00753

12. Starting circuit cut-off relay

- Disconnect the starting circuit cut-off relay coupler from the wire harness.
- Connect the pocket tester ($\Omega \times 1$) to the starting circuit cut-off relay coupler as shown.
- Check the starting circuit cut-off relay for continuity.

Continuity

No continuity

NOTE: _____

When you switch the positive and negative tester probes, the readings in the above chart will be reversed.

- Are the tester readings correct?

YES

NO

Replace the starting circuit cut-off relay.

13. Lean angle cut-off switch voltage

- Remove the lean angle cut-off switch.
- Connect the pocket tester ($\Omega \times 1$) to the lean angle cut-off switch terminals as shown.

Positive tester probe → blue
Negative tester probe → yellow/green

**Lean angle cut-off switch voltage**

Less than 65° (a) →

Approximately 1 V

More than 65° (b) →

Approximately 4 V

- Is the lean angle cut-off switch OK?

↓ YES ↓ NO

Replace the lean angle cut-off switch.

EAS00754

14. Wiring

- Check the entire ignition system's wiring.
Refer to "CIRCUIT DIAGRAM".
- Is the ignition system's wiring properly connected and without defects?

↓ YES ↓ NO

Replace the ignitor unit.

Properly connect or repair the ignition system's wiring.

CHECKING THE LIGHTING SYSTEM

- 1. The headlight and the high beam indicator light fail to come on.

1. Headlight bulb and socket

- Check the headlight bulb and socket for continuity.
Refer to "CHECKING THE BULBS AND BULB SOCKETS"
- Are the headlight bulb and socket OK?

YES

NO

Replace the head-light bulb, socket or both.

2. Voltage

- Connect the pocket tester (DC 20 V) to the headlight and meter assembly couplers as shown.

- A When the dimmer switch is set to “”
 B When the dimmer switch is set to “”

Meter assembly coupler (wire harness side)

- Turn the main switch to “ON”.
- Start the engine.
- Set the dimmer switch to “” or “”.
- Measure the voltage (DC 12 V) of black/blue ① or black/yellow ③ on the headlight coupler (wire harness side).
- Is the voltage within specification?

YES

This circuit is OK.

NO

The wiring circuit from the main switch to the headlight coupler is faulty and must be repaired.

EAS00789

2. The meter light fails to come on.

1. Meter light (LEDs)

- Check the meter light for continuity.
Refer to "CHECKING THE LEDs"
- Are the meter light OK?

Replace the meter assembly.

EAS00790

3. The tail/brake light fails to come on.

1. Tail/brake light (LEDs)

- Check the tail/brake light for continuity.
Refer to "CHECKING THE LEDs"
- Are the tail/brake light OK?

Replace the tail/brake light assembly.

2. Voltage

- Connect the pocket tester (DC 20 V) to the meter assembly coupler (wire harness side) as shown.

Positive tester probe → blue ①**Negative tester probe → black/white ②**

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of blue ① on the meter assembly coupler (wire harness side).
- Is the voltage within specification?

This circuit is OK.

The wiring circuit from the main switch to the meter assembly coupler is faulty and must be repaired.

2. Voltage

- Connect the pocket tester (DC 20 V) to the tail/brake light coupler (wire harness side) as shown.

Positive tester probe → blue/red ①**Negative tester probe → black ②**

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of blue/red ① on the tail/brake light coupler (wire harness side).
- Is the voltage within specification?

This circuit is OK.

Wiring circuit from the main switch to the tail/brake light coupler is faulty and must be repaired.

EAS00792

4. The license light fails to come on.

1. License light bulb and socket

- Check the license light bulb and socket for continuity.
Refer to “CHECKING THE BULBS AND BULB SOCKETS”
- Are the license light bulb and socket OK?

↓ YES

↓ NO

Replace the license light bulb, socket or both.

2. Voltage

- Connect the pocket tester (DC 20 V) to the license light coupler (wire harness light side) as shown.

Positive tester probe → blue/red ①

Negative tester probe → black ②

- Turn the main switch to “ON”.
- Measure the voltage (DC 12 V) of blue/red ① on the license light coupler (wire harness side).
- Is the voltage within specification?

↓ YES

↓ NO

This circuit is OK.

The wiring circuit from the main switch to the license light coupler is faulty and must be repaired.

NOTICE

This manual was produced by the Yamaha Motor Company, Ltd. primarily for use by Yamaha dealers and their qualified mechanics. It is not possible to include all the knowledge of a mechanic in one manual. Therefore, anyone who uses this book to perform maintenance and repairs on Yamaha vehicles should have a basic understanding of mechanics and the techniques to repair these types of vehicles. Repair and maintenance work attempted by anyone without this knowledge is likely to render the vehicle unsafe and unfit for use.

This model has been designed and manufactured to perform within certain specifications in regard to performance and emissions. Proper service with the correct tools is necessary to ensure that the vehicle will operate as designed. If there is any question about a service procedure, it is imperative that you contact a Yamaha dealer for any service information changes that apply to this model. This policy is intended to provide the customer with the most satisfaction from his vehicle and to conform to federal environmental quality objectives.

Yamaha Motor Company, Ltd. is continually striving to improve all of its models. Modifications and significant changes in specifications or procedures will be forwarded to all authorized Yamaha dealers and will appear in future editions of this manual where applicable.

NOTE:

- This Service Manual contains information regarding periodic maintenance to the emission control system. Please read this material carefully.
- Designs and specifications are subject to change without notice.

IMPORTANT MANUAL INFORMATION

Particularly important information is distinguished in this manual by the following.

The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

WARNING Failure to follow WARNING instructions could result in severe injury or death to the motorcycle operator, a bystander or a person checking or repairing the motorcycle.

CAUTION:

A CAUTION indicates special precautions that must be taken to avoid damage to the motorcycle.

NOTE:

A NOTE provides key information to make procedures easier or clearer.

HOW TO USE THIS MANUAL

This manual is intended as a handy, easy-to-read reference book for the mechanic. Comprehensive explanations of all installation, removal, disassembly, assembly, repair and check procedures are laid out with the individual steps in sequential order.

① The manual is divided into chapters. An abbreviation and symbol in the upper right corner of each page indicate the current chapter.

Refer to "SYMBOLS".

② Each chapter is divided into sections. The current section title is shown at the top of each page, except in Chapter 3 ("PERIODIC CHECKS AND ADJUSTMENTS"), where the sub-section title(s) appears.

③ Sub-section titles appear in smaller print than the section title.

④ To help identify parts and clarify procedure steps, there are exploded diagrams at the start of each removal and disassembly section.

⑤ Numbers are given in the order of the jobs in the exploded diagram. A circled number indicates a disassembly step.

⑥ Symbols indicate parts to be lubricated or replaced.

Refer to "SYMBOLS".

⑦ A job instruction chart accompanies the exploded diagram, providing the order of jobs, names of parts, notes in jobs, etc.

⑧ Jobs requiring more information (such as special tools and technical data) are described sequentially.

CLUTCH **ENG**

Diagram illustrating the exploded view of the clutch assembly. Numbered callouts point to specific parts: 1 points to the cover, 2 points to a spring, 3 points to a plate, 4 points to a bolt, and 5 points to another bolt. Technical notes include torque specifications of 12 Nm (1.2 m·kg, 8.7 ft·lb) for bolts 1 and 2, and a note about the Yonaka bond part number 9115.

CLUTCH **ENG**

REMOVING THE CLUTCH

- Remove:
 - clutch cover ①
 - gasket

NOTE:
Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern.
After all of the bolts are fully loosened, remove them.

Universal clutch holder
90890-04086, YM-91042

- Remove:
 - compression spring bolts ①
 - compression springs
 - pressure plate ②
 - pull rod ③
 - friction plates
 - clutch plates
- Straighten the lock washer tab.
- Loosen:
 - clutch boss nut ①

NOTE:
While holding the clutch boss ② with the universal clutch holder, loosen the clutch boss nut.

CHECKING THE FRICTION PLATES
The following procedure applies to all of the friction plates.

- Check:
 - friction plate
Damage/wear → Replace the friction plates as a set.

Order	Job/Part	Q'ty	Remarks

FEATURES

OUTLINE OF FI SYSTEM

The main function of a fuel supply system is to provide fuel to the combustion chamber at the optimum air-fuel ratio in accordance with the engine operating conditions and the atmospheric temperature. In the conventional carburetor system, the air-fuel ratio of the mixture that is supplied to the combustion chamber is created by the volume of the intake air and the fuel that is metered by the jet used in the respective chamber.

Despite the same volume of intake air, the fuel volume requirement varies by the engine operating conditions, such as acceleration, deceleration, or operating under a heavy load. Carburetors that meter the fuel through the use of jets have been provided with various auxiliary devices, so that an optimum air-fuel ratio can be achieved to accommodate the constant changes in the operating conditions of the engine.

As the requirements for the engine to deliver more performance and cleaner exhaust gases increase, it becomes necessary to control the air-fuel ratio in a more precise and finely tuned manner. To accommodate this need, this model has adopted an electronically controlled fuel injection (FI) system, in place of the conventional carburetor system. This system can achieve an optimum air-fuel ratio required by the engine at all times by using a microprocessor that regulates the fuel injection volume according to the engine operating conditions detected by various sensors.

The adoption of the FI system has resulted in a highly precise fuel supply, improved engine response, better fuel economy, and reduced exhaust emissions. Furthermore, the air induction system (AI system) has been placed under computer control together with the FI system in order to realize cleaner exhaust gases.

EAS00897

FI SYSTEM

The fuel pump delivers fuel to the injector via the fuel filter. The pressure regulator maintains the fuel pressure that is applied to the injector at only 284 kPa (2.84 kg/cm²) higher than the intake manifold pressure. Accordingly, when the energizing signal from the ECU energizes the injector, the fuel passage opens, causing the fuel to be injected into the intake manifold only during the time the passage remains open. Therefore, the longer the length of time the injector is energized (injection duration), the greater the volume of fuel that is supplied. Conversely, the shorter the length of time the injector is energized (injection duration), the lesser the volume of fuel that is supplied.

The injection duration and the injection timing are controlled by the ECU. Signals that are input from the throttle position sensor, crankshaft position sensor, intake air pressure sensor, atmospheric pressure sensor, intake temperature sensor and coolant temperature sensor enable the ECU to determine the injection duration. The injection timing is determined through the signals from the crankshaft position sensor and the cylinder identification sensor. As a result, the volume of fuel that is required by the engine can be supplied at all times in accordance with the driving conditions.

- ① Multi-function display
- ② "SELECT" button
- ③ "RESET" button
- ④ Engine trouble warning light

INSTRUMENT FUNCTION

Multi-function display

The multi-function display is equipped with the following:

- a speedometer (which shows the riding speed)
- an odometer (which shows the total distance traveled)
- two tripometers (which show the distance traveled since they were last set to zero)
- a fuel reserve tripmeter (which shows the distance traveled since the fuel level warning light came on)
- a clock
- a self-diagnosis device
- a display brightness and engine speed warning light control mode

NOTE:

- Be sure to turn the key to "ON" before using the "SELECT" and "RESET" buttons.
- For the U.K. only: To switch the speedometer and odometer/tripmeter display between kilometers and miles, press the "SELECT" button and "RESET" button together for at least two seconds.

Odometer and tripmeter modes

Pushing the "SELECT" button switches the display between the odometer mode "ODO" and the trip meter modes "TRIP 1" and "TRIP 2" in the following order:

ODO → TRIP 1 → TRIP 2 → ODO

If the fuel level warning light comes on, the odometer display will automatically change to the fuel reserve tripmeter mode "F-TRIP" and start counting the distance traveled from that point. In that case, pushing the "SELECT" button switches the display between the various tripmeter and odometer modes in the following order:

F-TRIP → TRIP 1 → TRIP 2 → ODO → F-TRIP

To reset a tripmeter, select it by pushing the "SELECT" button, and then push the "RESET" button for at least one second. If you do not reset the fuel reserve tripmeter manually, it will reset itself automatically and the display will return to the prior mode after refueling and traveling 5 km (3.1 mi).

Clock mode

Turn the key to "ON".

To change the display to the clock mode, push the "SELECT" button for at least one second.

To change the display back to the prior mode, push the "SELECT" button.

To set the clock:

1. Push the "SELECT" button and "RESET" button together for at least two seconds.
2. When the hour digits start flashing, push the "RESET" button to set the hours.
3. Push the "SELECT" button, and the minute digits will start flashing.
4. Push the "RESET" button to set the minutes.
5. Push the "SELECT" button and then release it to start the clock.

- ① Shift timing indicator light
- ② "SELECT" button
- ③ "RESET" button

4. Shift timing indicator light deactivation: This function allows you to select the engine speed at which the indicator light will be deactivated.
5. Shift timing indicator light brightness: This function allows you to adjust the brightness of the indicator light to suit your preference.

NOTE:

- To make any settings in this mode, you have to cycle through all of its functions. However, if the key is turned to "OFF" or engine is started before completing the procedure, only the settings made before the "SELECT" button was last pushed will be applied.
- In this mode, the multi-function display shows the current setting for each function (except the shift timing indicator light activity function).

To adjust the display brightness

1. Turn the key to "OFF".
2. Push and hold the "SELECT" button.
3. Turn the key to "ON", and then, after five seconds, release the "SELECT" button.
4. Push the "RESET" button to select the desired display brightness level.
5. Push the "SELECT" button to confirm the selected display brightness level. The control mode changes to the shift timing indicator light activity function.

To set the shift timing indicator light activity function

1. Push the "RESET" button to select one of the following indicator light activity settings:
 - a. The indicator light will stay on when activated. (This setting is selected when the indicator light stays on.)
 - b. The indicator light will flash when activated. (This setting is selected when the indicator light flashes four times per second.)
 - c. The indicator light is deactivated; in other words, it will not come on or flash. (This setting is selected when the indicator light flashes once every two seconds.)
2. Push the "SELECT" button to confirm the selected indicator light activity. The control mode changes to the shift timing indicator light activation function.

Display brightness and shift timing indicator light control mode

This mode cycles through five control functions, allowing you to make the following settings in the order listed below.

1. Display brightness: This function allows you to adjust the brightness of the multi-function display to suit the outside lighting conditions.
2. Shift timing indicator light activity: This function allows you to choose whether or not the indicator light should be activated and whether it should blink or stay on when activated.
3. Shift timing indicator light activation: This function allows you to select the shift timing at which the indicator light will be activated.

4. Shift timing indicator light deactivation: This function allows you to select the engine speed at which the indicator light will be deactivated.
5. Shift timing indicator light brightness: This function allows you to adjust the brightness of the indicator light to suit your preference.

- NOTE:**
- To make any settings in this mode, you have to cycle through all of its functions. However, if the key is turned to "OFF" or engine is started before completing the procedure, only the settings made before the "SELECT" button was last pushed will be applied.
 - In this mode, the multi-function display shows the current setting for each function (except the shift timing indicator light activity function).

To set the shift timing indicator light activation function

NOTE: _____

- The indicator light activation function can be set between 10,000 and 16,000 r/min.
- From 10,000 r/min to 12,000 r/min, the indicator light can be set in increments of 500 r/min.
- From 12,000 r/min to 16,000 r/min, the indicator light can be set in increments of 200 r/min.

-
1. Push the "RESET" button to select the desired engine speed for activating the indicator light.
 2. Push the "SELECT" button to confirm the selected engine speed.

The control mode changes to the shift timing indicator light deactivation function.

To set the shift timing indicator light deactivation function

NOTE: _____

- The indicator light deactivation function can be set between 7,000 and 12,000 r/min in increments of 500 r/min.
- Be sure to set the deactivation function to a higher engine speed than for the activation function, otherwise the shift timing indicator light will remain deactivated.

-
1. Push the "RESET" button to select the desired engine speed for deactivating the indicator light.
 2. Push the "SELECT" button to confirm the selected engine speed.

The control mode changes to the shift timing indicator light brightness function.

To adjust the shift timing indicator light brightness

1. Push the "RESET" button to select the desired indicator light brightness level.
2. Push the "SELECT" button to confirm the selected indicator light brightness level. The multi-function display will return to the odometer, tripmeter or clock mode.

IMPORTANT INFORMATION PREPARATION FOR REMOVAL AND DISASSEMBLY

1. Before removal and disassembly, remove all dirt, mud, dust and foreign material.
2. Use only the proper tools and cleaning equipment.
Refer to the "SPECIAL TOOLS".
3. When disassembling, always keep mated parts together. This includes gears, cylinders, pistons and other parts that have been "mated" through normal wear. Mated parts must always be reused or replaced as an assembly.
4. During disassembly, clean all of the parts and place them in trays in the order of disassembly. This will speed up assembly and allow for the correct installation of all parts.
5. Keep all parts away from any source of fire.

EAS00021

REPLACEMENT PARTS

Use only genuine Yamaha parts for all replacements. Use oil and grease recommended by Yamaha for all lubrication jobs. Other brands may be similar in function and appearance, but inferior in quality.

EAS00022

GASKETS, OIL SEALS AND O-RINGS

1. When overhauling the engine, replace all gaskets, seals and O-rings. All gasket surfaces, oil seal lips and O-rings must be cleaned.
2. During reassembly, properly oil all mating parts and bearings and lubricate the oil seal lips with grease.

EAS00023

LOCK WASHERS/PLATES AND COTTER PINS

After removal, replace all lock washers/plates (1) and cotter pins. After the bolt or nut has been tightened to specification, bend the lock tabs along a flat of the bolt or nut.

EAS00024

BEARINGS AND OIL SEALS

Install bearings and oil seals so that the manufacturer's marks or numbers are visible. When installing oil seals, lubricate the oil seal lips with a light coat of lithium-soap-based grease. Oil bearings liberally when installing, if appropriate.

(1) Oil seal

CAUTION:

Do not spin the bearing with compressed air because this will damage the bearing surfaces.

EAS00025

CIRCLIPS

Before reassembly, check all circlips carefully and replace damaged or distorted circlips. Always replace piston pin clips after one use. When installing a circlip (1), make sure the sharp-edged corner (2) is positioned opposite the thrust (3) that the circlip receives.

(4) Shaft

EAS00026

CHECKING THE CONNECTIONS

Check the leads, couplers, and connectors for stains, rust, moisture, etc.

1. Disconnect:

- lead
- coupler
- connector

2. Check:

- lead
- coupler
- connector

Moisture → Dry with an air blower.

Rust/stains → Connect and disconnect several times.

3. Check:

- all connections
- Loose connection → Connect properly.

NOTE: _____

If the pin ① on the terminal is flattened, bend it up.

4. Connect:

- lead
- coupler
- connector

NOTE: _____

Make sure all connections are tight.

5. Check:

- continuity
- (with the pocket tester)

**Pocket tester**

90890-03112, YU-3112

NOTE: _____

- If there is no continuity, clean the terminals.
- When checking the wire harness, perform steps (1) to (3).
- As a quick remedy, use a contact revitalizer available at most part stores.

EAS00027

SPECIAL TOOLS

The following special tools are necessary for complete and accurate tune-up and assembly. Use only the appropriate special tools as this will help prevent damage caused by the use of inappropriate tools or improvised techniques. Special tools, part numbers or both may differ depending on the country. When placing an order, refer to the list provided below to avoid any mistakes.

NOTE:

- For U.S.A. and Canada, use part number starting with "YM-", "YU-", or "ACC-".
- For others, use part number starting with "90890-".

GENERAL TIGHTENING TORQUE SPECIFICATIONS

This chart specifies tightening torques for standard fasteners with a standard ISO thread pitch. Tightening torque specifications for special components or assemblies are provided for each chapter of this manual. To avoid warpage, tighten multi-fastener assemblies in a crisscross pattern and progressive stages until the specified tightening torque is reached. Unless otherwise specified, tightening torque specifications require clean, dry threads. Components should be at room temperature.

A: Distance between flats
B: Outside thread diameter

- C Pass the clutch cable through the guide.
- D Plastic locking tie shall be positioned at 10 mm (0.39 in.) below from the upper bracket.
- E Clamp the left handlebar switch lead to the front fork with the plastic locking tie and cut the tip of the tie. Clamp it to the protector section.

- F** Pass the horn lead by the outside of the throttle cables and clamp it to the forefront of upper face of the under bracket. And then route it under the front brake hose and clamp it to the pawl of the under cover.
- G** Clamp it at the position of 40 ~ 60 mm (1.57 ~ 2.36 in) from the upper face of the under bracket with the plastic locking tie. Cut the surplus part of the clamp tip leaving 2 ~ 4 mm (0.08 ~ 0.16 in). Point the tip of the clamp to the outside of vehicle.
- H** Pass the throttle cables inside the front brake hoses.
- I** Set in the coupler between the head light's hollow section and the duct.
- J** Install the relay to the rib of the headlight. (Location for the left and right relays is alternative.)
- K** To the wire harness
- L** To the front turn signal/position light (right)
- M** Set the sub wire harness in the joint.
- N** Do not catch the sub wire harness when the duct is assembled.

- [C] Pass the coolant reservoir tank hose under the frame and right side of the throttle body.

- [D] Pass the clutch cable inside of the coolant reservoir tank hose and radiator return hoses.
- [E] The punch mark starting point should be lower than the clamp's top end.
However, the aiming position of the punch mark starting point should be 5 mm (0.20 in) below the clamp's bottom end.
- [F] Pass the clutch cable inside of the radiator hose.
- [G] Assemble as “(a)” shown below when clamping.
- [H] Tip of the plastic locking tie shall be pointed to the inner side at the rear part of the vehicle.
- [I] Clamp the clutch cable so that it is positioned in this range.
- [J] Clamp the clutch cable by routing the upper end of the clamp along with the bottom end of the hose clamp assembly.

- K Put and apply the hose clamp to it.
 L Pass the crankshaft position sensor lead over the throttle stop screw.

- [A] Pass the main switch lead under the left handlebar switch lead and then to the right side of the vehicle.
- [B] Pass the throttle stop cable by the left side of the sidestand switch lead, oil level switch lead, A.C. magneto lead, fuel tank drain hose and fuel tank breather hose, and then to the right side of the vehicle.
- [C] Pass the fuel tank drain hose and fuel tank breather hose inside of the reservoir tank breather hose and reservoir tank hose, wire harness and throttle stop cable and then route it by the out side of the starter motor lead.
- [D] To the throttle body.
- [E] Route the coolant reservoir tank hose by the outside of the fuel tank drain hose and the fuel tank breather hose.

- [F] Pass the fuel tank drain hose and fuel tank breather hose through the clamp of the coolant reservoir tank.
- [G] Projection allowance from the coolant reservoir tank cover shall be 30 ~ 50 mm (1.18 ~ 1.97 in).
- [H] 10 ~ 50 mm (0.39 ~ 1.97 in).
- [I] Fasten the sidestand switch lead and oil level switch lead with a clamp.
- [J] Pass the coolant reservoir tank breather hose, oil level switch lead and sidestand switch lead through the clamp.
- [K] Pass the sidestand switch lead, oil level switch lead and A.C. magneto lead between the engine stay and the engine.
- [L] To the radiator fan motor relay and fuse box
- [M] Route it above the radiator hose.
- [N] Pass the throttle cable between the guide 2 and the frame.
- [O] Pass the radiator fan motor lead through the hole of the frame to the inner side of the vehicle.
- [P] To the horn.
- [Q] Route it below the coolant reservoir tank.
- [R] Pass the coolant reservoir tank breather hose through the hole of the coolant reservoir tank cover.

- [Y] Sealing set of the cover can be either upper or lower against the frame lower end. However, it should not be caught.
- [Z] Clamp the wire harness, main switch lead branch section and radiator fan motor lead.
- [AA] Branching leads to the fuse box and radiator fan motor relay shall pass through the guide section of the cover 2 under the wire harness and then to the outside of the frame.

- AB** To the fuse box and fan motor relay
- AC** Pass the throttle cables over the cover 2.
- AD** Point the tip of the plastic locking tie to the rear side of the vehicle.
- AE** To the main switch lead coupler
- AF** Tip of the plastic locking tie should point to the downward outside of the vehicle.
- AG** Use the plastic locking tie to clamp the starter motor lead at the protector section.
- AH** Branching harness from the wire harness.

- A Push the starter motor lead in the clamping sections (two points) or the battery box assembly and secure it.
- B Fit the plastic cover in the starter relay after the flange bolts are installed.
- C Make sure to clamp the wire harness. (Tighten it until the clamp latchet stops.)
- D Install to the deepest position of the rib of the battery box assembly.
- E When installing the ECU, make sure to hook the pawls of the battery box assembly (at four points).
- F Hook of the battery box assembly shall hook on the upper face of the fuse box. (It should not be put on the side face.)
- G Install the pin of the battery box assembly to its base.

- [H] The knob section should be positioned in this area.
- [I] Pass the turn signal lead by the outside of the right side attaching boss of the tail/brake light.
- [J] Pass the turn signal light and license light leads between the rear side ribs of the battery box assembly and to the rear part of the vehicle.
- [K] Connect the turn signal lead couplers.
- [L] Connect the license light leads.
- [M] Route the branching lead to the license light behind the tail/brake light left side attaching boss.
- [N] Route the tail/brake light lead under the projection part.
- [O] Route the tail/brake light lead above the projection part.
- [P] There should be no significant difference between right and left side of the tension rate on the band.

PERIODIC CHECKS AND ADJUSTMENTS

INTRODUCTION

This chapter includes all information necessary to perform recommended checks and adjustments. If followed, these preventive maintenance procedures will ensure more reliable vehicle operation, a longer service life and reduce the need for costly overhaul work. This information applies to vehicles already in service as well as to new vehicles that are being prepared for sale. All service technicians should be familiar with this entire chapter.

NOTE: _____

From 24,000 mi (37,000 km) 36 months, repeat the maintenance intervals starting from 4,000 mi (7,000 km) or 6 months.

NOTE: _____

- The air filter needs more frequent service if you are riding in unusually wet or dusty areas.
- Hydraulic brake service
 - After disassembling the brake master cylinders and calipers, always change the fluid. Regularly check the brake fluid levels and fill the reservoirs as required.
 - Every two years replace the internal components of the brake master cylinders and calipers, and change the brake fluid.
 - Replace the brake hoses every four years and if cracked or damaged.

Refer to "SEATS". Disconnect. Disconnect. For installation, reverse the removal procedure.

**REMOVING THE FUEL TANK**

1. Extract the fuel in the fuel tank through the fuel tank cap with a pump.
2. Remove:
 - fuel return hose
 - fuel hose

CAUTION: _____

- Be sure to disconnect the fuel hose by hand. Do not forcefully disconnect the hose with tools.
- Although the fuel has been removed from the fuel tank, be careful when removing the fuel hoses, since there may be fuel remaining in it.

NOTE: _____

Before removing the hoses, place a few rags in the area under where it will be removed.

3. Remove:
 - fuel tank

NOTE: _____

Do not set the fuel tank down so that the installation surface of the fuel pump is directly under the tank. Be sure to lean the fuel tank in an upright position.

REMOVING THE FUEL PUMP

1. Remove:
 - fuel pump

CAUTION: _____

- Do not drop the fuel pump or give it a strong shock.
- Do not touch the base section of the fuel sender.

INSTALLING THE FUEL PUMP

1. Install:

- fuel pump

4 Nm (0.4 m·kg, 2.9 ft·lb)

NOTE:

- Do not damage the installation surfaces of the fuel tank when installing the fuel pump.
- Always use a new fuel pump gasket.
- Install the fuel pump as shown in the illustration.
- Tighten the fuel pump bolts in stages in a criss-cross pattern and to the specified torque.

INSTALLING THE FUEL TANK

1. Install:

- fuel hose
- fuel return hose
- fuel hose connector cover

CAUTION:

When installing the fuel hose, make sure that it is securely connected, and that the fuel hose holders are in the correct position, otherwise the fuel hose will not be properly installed.

NOTE:

Install the fuel hose connector securely onto the fuel tank until a distinct “click” is heard, and then make sure that it does not come loose.

After installing the fuel hose connector cover①, make sure that the holders ②, ③, and ④ on the cover are installed securely.

2. Install:

- fuel sender coupler
- fuel pump coupler
- fuel tank breather hose
- fuel tank overflow hose

**REMOVAL**

1. Remove:
 - rear cowling
 - side cowlings

NOTE: _____
To remove the quick fastener, push its center with a screwdriver, then pull the fastener out.

**INSTALLATION**

1. Install:
 - side cowlings
 - rear cowling

NOTE: _____
To install the quick fastener, push its pin so that it protrudes from the fastener head, then insert the fastener into the cowling and push the pin @ in with a screwdriver. Make sure that the pin is flush with the fastener's head.

AIR FILTER CASE

ENGINE**ADJUSTING THE VALVE CLEARANCE**

The following procedure applies to all of the valves.

NOTE:

- Valve clearance adjustment should be made on a cold engine, at room temperature.
- When the valve clearance is to be measured or adjusted, the piston must be at top dead center (TDC) on the compression stroke.

1. Remove

- rider seat
Refer to "SEATS".
- fuel tank
Refer to "FUEL TANK".
- air filter case
Refer to "AIR FILTER CASE".
- bottom cowling
- side cowlings
Refer to "COWLINGS".
- throttle body assembly
Refer to "THROTTLE BODIES" in chapter 7.
- air cut-off valve
Refer to "AIR INDUCTION SYSTEM" in chapter 7.
- radiator
- radiator fan motor
Refer to "RADIATOR" in chapter 6.

2. Remove

- ignition coils
- spark plugs
- cylinder head cover
- cylinder head cover gasket
Refer to "CAMSHAFT" in chapter 5.

3. Remove

- pickup rotor cover ①

ADJUSTING THE VALVE CLEARANCE

CHK
ADJ

4. Measure:

 - valve clearance
Out of specification → Adjust.

Valve clearance (cold)

Intake valve

0.13 ~ 0.20 mm

(0.0051 ~ 0.00

Exhaust valve

0.23 ~ 0.30 m

(0.0091 ~ 0.0118)

(classical - classical)

- a. Turn the crankshaft counterclockwise.
 - b. When piston #1 is at TDC on the compression stroke, align the TDC mark (a) on the pickup rotor with the crankcase mating surface (b).

NOTE:

TDC on the compression stroke can be found when the camshaft lobes are turned away from each other.

- c. Measure the valve clearance with a thickness gauge ①.

NOTE:

- If the valve clearance is incorrect, record the measured reading.
 - Measure the valve clearance in the following sequence.

Valve clearance measuring sequence
Cylinder #1 → #2 → #4 → #3

A Front

- d. To measure the valve clearances of the other cylinders, starting with cylinder #1 at TDC, turn the crankshaft counterclockwise as specified in the following table.

B Degrees that the crankshaft is turned counter-clockwise

C Cylinder

D Combustion cycle

Cylinder #2	180°
Cylinder #4	360°
Cylinder #3	540°

ADJUSTING THE VALVE CLEARANCE

**CHK
ADJ**

5. Remove:
 - camshafts

NOTE:

- Refer to “DISASSEMBLING THE ENGINE – CAMSHAFT AND CYLINDER HEAD” in chapter 5.
 - When removing the timing chain and camshafts, fasten the timing chain with a wire to retrieve it if it falls into the crankcase.

6. Adjust:
 - valve clearance

- a. Remove the valve lifter ① and the valve pad ② with a valve lapper ③.

**Valve lapper
90890-04101**

NOTE:

- Cover the timing chain opening with a rag to prevent the valve pad from falling into the crankcase.
 - Make a note of the position of each valve lifter ① and valve pad ② so that they can be installed in the correct place.

- b. Select the proper valve pad from the following table.

Valve pad thickness range	Available valve pads
Nos. 120 ~ 240	1.20 (0.0472) ~ 2.40 mm (0.0945 in)

NOTE-

- The thickness @ of each valve pad is marked in hundredths of millimeters on the side that touches the valve lifter.
 - Since valve pads of various sizes are originally installed, the valve pad number must be rounded in order to reach the closest equivalent to the original.

ADJUSTING THE VALVE CLEARANCE

CHK
ADJ

- c. Round off the original valve pad number according to the following table.

Last digit	Rounded value
0 or 2	0
5	5
8	10

EXAMPLE:

Original valve pad number
= 148 (thickness = 1.48 mm (0.058 in))

Rounded value = 150

- d. Locate the rounded number of the original valve pad and the measured valve clearance in the valve pad selection table. The point where the column and row intersect is the new valve pad number.

NOTE:

The new valve pad number is only an approximation. The valve clearance must be measured again and the above steps should be repeated if the measurement is still incorrect.

- e. Install the new valve pad ① and the valve lifter ②.

NOTE:

- Lubricate the valve pad with molybdenum disulfide grease.
- Lubricate the valve lifter with molybdenum disulfide oil.
- The valve lifter must turn smoothly when rotated by hand.
- Install the valve lifter and the valve pad in the correct place.

- f. Install the exhaust and intake camshafts, timing chain and camshaft caps.

Camshaft cap bolt
10 Nm (1.0 m·kg, 7.2 ft·lb)

NOTE:

- Refer to “ASSEMBLING AND ADJUSTING THE ENGINE – CYLINDER HEAD AND CAM-SHAFT” in chapter 5.
 - Lubricate the camshaft bearings, camshaft lobes and camshaft journals.
 - First, install the exhaust camshaft.
 - Align the camshaft marks with the camshaft cap marks.
 - Turn the crankshaft counterclockwise several full turns to seat the parts.

- g. Measure the valve clearance again.
- h. If the valve clearance is still out of specification, repeat all of the valve clearance adjustment steps until the specified clearance is obtained.

SYNCHRONIZING THE THROTTLE BODIES

NOTE: _____

Prior to synchronizing the throttle bodies, the valve clearance and the engine idling speed should be properly adjusted and the ignition timing should be checked.

1. Stand the motorcycle on a level surface.

NOTE: _____

Place the motorcycle on a suitable stand.

2. Remove:

- rider seat
Refer to "SEATS".
- fuel tank
Refer to "FUEL TANK".
- air filter case
Refer to "AIR FILTER CASE".

3. Remove:

- synchronizing hose ①

4. Install:

- vacuum gauge ①
(onto the synchronizing hose)
- digital tachometer
(near the spark plug)

5. Install:
 - air filter case
Refer to “AIR FILTER CASE”.
 - fuel tank
Refer to “FUEL TANK”.
 6. Start the engine and let it warm up for several minutes.
 7. Measure:
 - engine idling speed
Out of specification → Adjust.
Refer to “ADJUSTING THE ENGINE IDLING SPEED”.

**Engine idling speed
1,250 ~ 1,350 r/min**

NOTE: -

- After each step, rev the engine two or three times, each time for less than a second, and check the synchronization again.
 - If the air screw is removed, turn the screw 3/4 turn in and be sure to synchronize the throttle body.

CAUTION:

Do not use the throttle valve adjusting screws to adjust the throttle body synchronization.

NOTE:

When the throttle is opened, the accelerator cable ① is pulled.

**Throttle body side**

- Loosen the locknut ② on the decelerator cable.
- Turn the adjusting nut ③ in direction ④a or ④b to take up any slack on the decelerator cable.

Direction ④a	Throttle cable free play is increased.
Direction ④b	Throttle cable free play is decreased.

- Tighten the locknuts.

NOTE:

If the specified throttle cable free play cannot be obtained on the throttle body side of the cable, use the adjusting nut on the handlebar side.

**Handlebar side**

- Loosen the locknut ①.
- Turn the adjusting nut ② in direction ④a or ④b until the specified throttle cable free play is obtained.

Direction ④a	Throttle cable free play is increased.
Direction ④b	Throttle cable free play is decreased.

- Tighten the locknut.

⚠ WARNING

After adjusting the throttle cable free play, start the engine and turn the handlebars to the right and to the left to ensure that this does not cause the engine idling speed to change.

15.50 bar, 220.46 psi)**

Maximum

**1,736 kPa (17.36 kg/cm²,
17.36 bar, 246.92 psi)**

- a. Turn the main switch to “ON”.
- b. With the throttle wide open, crank the engine until the reading on the compression gauge stabilizes.

WARNING

To prevent sparking, ground all spark plug leads before cranking the engine.

NOTE:

The difference in compression pressure between cylinders should not exceed 100 kPa (1 kg/cm², 1 bar, 14.22 psi).

- c. If the compression pressure is above the maximum specification, check the cylinder head, valve surfaces and piston crown for carbon deposits.
Carbon deposits → Eliminate.

MEASURING THE COMPRESSION PRESSURE/ CHECKING THE ENGINE OIL LEVEL

**CHK

CHASSIS**ADJUSTING THE FRONT BRAKE**

1. Adjust:

- brake lever position
(distance **a** from the throttle grip to the brake lever)

NOTE:

- While pushing the brake lever forward, turn the adjusting dial **①** until the brake lever is in the desired position.
- Be sure to align the setting on the adjusting dial with the arrow mark **②** on the brake lever holder.

Position #1	Distance a is the largest.
Position #5	Distance a is the smallest.

⚠ WARNING

- After adjusting the brake lever position, make sure the pin on the brake lever holder is firmly inserted in the hole in the adjusting dial.
- A soft or spongy feeling in the brake lever can indicate the presence of air in the brake system. Before the vehicle is operated, the air must be removed by bleeding the brake system. Air in the brake system will considerably reduce in loss of control and possibly an accident. Therefore, check and if necessary, bleed the brake system.

CAUTION:

After adjusting the brake lever position, make sure there is no brake drag.

WARNING

A soft or spongy feeling in the brake pedal can indicate the presence of air in the brake system. Before the vehicle is operated, the air must be removed by bleeding the brake system. Air in the brake system will considerably reduce braking performance and could result in loss of control and possibly an accident. Therefore, check and, if necessary, bleed the brake system.

⚠ WARNING _____

- Use only the designated brake fluid. Other brake fluids may cause the rubber seals to deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid that is already in the system. Mixing brake fluids may result in a harmful chemical reaction, leading to poor brake performance.
- When refilling, be careful that water does not enter the brake fluid reservoir. Water will significantly lower the boiling point of the brake fluid and could cause vapor lock.

BLEEDING THE HYDRAULIC BRAKE SYSTEM

WARNING

Bleed the hydraulic brake system whenever:

- the system is disassembled.
 - a brake hose is loosened, disconnected or replaced.
 - the brake fluid level is very low.
 - brake operation is faulty.

NOTE:

- Be careful not to spill any brake fluid or allow the brake fluid reservoir to overflow.
 - When bleeding the hydraulic brake system, make sure there is always enough brake fluid before applying the brake. Ignoring this precaution could allow air to enter the hydraulic brake system, considerably lengthening the bleeding procedure.
 - If bleeding is difficult, it may be necessary to let the brake fluid settle for a few hours. Repeat the bleeding procedure when the tiny bubbles in the hose have disappeared.

1. Bleed:

- hydraulic brake system

- a. Fill the brake fluid reservoir to the proper level with the recommended brake fluid.
 - b. Install the brake fluid reservoir diaphragm.
 - c. Connect a clear plastic hose ① tightly to the bleed screw ②.

- d. Place the other end of the hose into a container.
 - e. Slowly apply the brake several times.
 - f. Fully pull the brake lever or fully press down the brake pedal and hold it in position.

EAS00142

LUBRICATING THE DRIVE CHAIN

The drive chain consists of many interacting parts. If the drive chain is not maintained properly, it will wear out quickly. Therefore, the drive chain should be serviced, especially when the motorcycle is used in dusty areas.

This motorcycle has a drive chain with small rubber O-rings between each side plate. Steam cleaning, high-pressure washing, certain solvents, and the use of a coarse brush can damage these O-rings. Therefore, use only kerosene to clean the drive chain. Wipe the drive chain dry and thoroughly lubricate it with engine oil or chain lubricant that is suitable for O-ring chains. Do not use any other lubricants on the drive chain since they may contain solvents that could damage the O-rings.

	Recommended lubricant Engine oil or chain lubricant suitable for O-ring chains

⚠ WARNING

- Do not use a tubeless tire on a wheel designed only for tube tires to avoid tire failure and personal injury from sudden deflation.
- When using a tube tire, be sure to install the correct tube.
- Always replace a new tube tire and a new tube as a set.
- To avoid pinching the tube, make sure the wheel rim band and tube are centered in the wheel groove.
- Patching a punctured tube is not recommended. If it is absolutely necessary to do so, use great care and replace the tube as soon as possible with a good quality replacement.

⚠ WARNING

- After extensive tests, the tires listed below have been approved by Yamaha Motor Co., Ltd. for this model. The front and rear tires should always be by the same manufacturer and of the same design. No guarantee concerning handling characteristics can be given if a tire combination other than one approved by Yamaha is used on this motorcycle.

Front tire

⚠ WARNING

New tires have a relatively low grip on the road surface until they have been slightly worn. Therefore, approximately 100 km should be traveled at normal speed before any high-speed riding is done.

**NOTE:**

- For tires with a direction of rotation mark ①:
- Install the tire with the mark pointing in the direction of wheel rotation.
 - Align the mark ② with the valve installation point.

ELECTRICAL SYSTEM CHECKING AND CHARGING THE BATTERY

⚠ WARNING

Batteries generate explosive hydrogen gas and contain electrolyte which is made of poisonous and highly caustic sulfuric acid. Therefore, always follow these preventive measures:

- Wear protective eye gear when handling or working near batteries.
- Charge batteries in a well-ventilated area.
- Keep batteries away from fire, sparks or open flames (e.g., welding equipment, lighted cigarettes).
- DO NOT SMOKE when charging or handling batteries.
- KEEP BATTERIES AND ELECTROLYTE OUT OF REACH OF CHILDREN.
- Avoid bodily contact with electrolyte as it can cause severe burns or permanent eye injury.

FIRST AID IN CASE OF BODILY CONTACT: EXTERNAL

- Skin – Wash with water.
- Eyes – Flush with water for 15 minutes and get immediate medical attention.

INTERNAL

- Drink large quantities of water or milk followed with milk of magnesia, beaten egg or vegetable oil. Get immediate medical attention.

CAUTION:

- This is a sealed battery. Never remove the sealing caps because the balance between cells will not be maintained and battery performance will deteriorate.
- Charging time, charging amperage and charging voltage for an MF battery are different from those of conventional batteries. The MF battery should be charged as explained in the charging method illustrations. If the battery is overcharged, the electrolyte level will drop considerably. Therefore, take special care when charging the battery.

NOTE: -

Since MF batteries are sealed, it is not possible to check the charge state of the battery by measuring the specific gravity of the electrolyte. Therefore, the charge of the battery has to be checked by measuring the voltage at the battery terminals.

1. Remove:
 - rider seat
Refer to “SEATS”.
 2. Disconnect:
 - battery leads
(from the battery terminals)

CAUTION:

First, disconnect the negative battery lead ①, and then the positive battery lead ②.

- Positive tester probe → positive battery terminal
- Negative tester probe → negative battery terminal

NOTE: -

- The charge state of an MF battery can be checked by measuring its open-circuit voltage (i.e., the voltage when the positive battery terminal is disconnected).
 - No charging is necessary when the open-circuit voltage equals or exceeds 12.8 V.

- b. Check the charge of the battery, as shown in the charts and the following example.

Example

- c. Open-circuit voltage = 12.0 V
 - d. Charging time = 6.5 hours
 - e. Charge of the battery = 20 ~ 30%

CHECKING AND CHARGING THE BATTERY

CHK
ADJ

5. Charge:

- battery
(refer to the appropriate charging method illustration)

WARNING

Do not quick charge a battery.

CAUTION:

- Never remove the MF battery sealing caps.
- Do not use a high-rate battery charger since it forces a high-amperage current into the battery quickly and can cause battery overheating and battery plate damage.
- If it is impossible to regulate the charging current on the battery charger, be careful not to overcharge the battery.
- When charging a battery, be sure to remove it from the motorcycle. (If charging has to be done with the battery mounted on the motorcycle, disconnect the negative battery lead from the battery terminal.)
- To reduce the chance of sparks, do not plug in the battery charger until the battery charger leads are connected to the battery.
- Before removing the battery charger lead clips from the battery terminals, be sure to turn off the battery charger.
- Make sure the battery charger lead clips are in full contact with the battery terminal and that they are not shorted. A corroded battery charger lead clip may generate heat in the contact area and a weak clip spring may cause sparks.
- If the battery becomes hot to the touch at any time during the charging process, disconnect the battery charger and let the battery cool before reconnecting it. Hot batteries can explode!
- As shown in the following illustration, the open-circuit voltage of an MF battery stabilizes about 30 minutes after charging has been completed. Therefore, wait 30 minutes after charging is completed before measuring the open-circuit voltage.

Refer to "CHECKING THE TIRES" and "CHECKING THE WHEELS" in chapter 3.

3. Measure:

 - radial wheel runout ①
 - lateral wheel runout ②

Over the specified limits → Replace.

Radial wheel runout limit

1 mm (0.04 in)

Lateral wheel runout limit

0.5 mm (0.02 in)

4. Check:
 - wheel bearings
Front wheel turns roughly or is loose → Replace the wheel bearings.
 - oil seals
Damage/wear → Replace.

- c. Remove the wheel bearings ③ with a general bearing puller.
 - d. Install the new wheel bearings and oil seals in the reverse order of disassembly.

CAUTION:

Do not contact the wheel bearing inner race ① or balls ②. Contact should be made only with the outer race ③.

NOTE: —

Use a socket ④ that matches the diameter of the wheel bearing outer race and oil seal.

EAS00545 INSTALLING THE FRONT WHEEL

The following procedure applies to both brake discs.

1. Lubricate:
 - wheel axle
 - oil seal lips

Recommended lubricant

Lithium-soap-based grease

2. Lift the wheel up between the fork legs.
 3. Insert the wheel axle.

NOTE:

Install the tire with the mark ① pointing in the direction of wheel rotation.

- Lower the front wheel so that it is on the ground.
 - Install the brake calipers by installing the bolts, and then tightening them to the specified torque.

NOTE:

Make sure that there is enough space between the brake pads before installing the brake calipers onto the brake discs.

Brake caliper bolt-

40 Nm (4.0 m·kg, 29 ft·lb)

6. Install the brake hose holders by installing the bolts and nuts.
 7. Secure the wheel axle by installing the axle bolt, and then tightening it to the specified torque.

Axle bolt-

91 Nm (9.1 m•kg, 66 ft•lb)

8. Tighten wheel axle pinch bolt ②, and then pinch bolt ① to specified torque.
9. Retighten pinch bolt ② to the specified torque.

Wheel axle pinch bolt:
18 Nm (1.8 m•kg, 13 ft•lb)

10. Tap the outer side of the left fork leg with a rubber mallet to align it with the end of the wheel axle.
11. Tighten wheel axle pinch bolt ④, and then pinch bolt ③ to specified torque.
12. Retighten pinch bolt ④ to the specified torque.

Wheel axle pinch bolt:
18 Nm (1.8 m•kg, 13 ft•lb)

13. While applying the front brake, push down hard on the handlebar several times to check for proper fork operation.

ADJUSTING THE FRONT WHEEL STATIC BALANCE

NOTE: _____

- After replacing the tire, wheel or both, the front wheel static balance should be adjusted.
- Adjust the front wheel static balance with the brake discs installed.

-
1. Remove:
 - balancing weight(s)
 2. Find:
 - front wheel's heavy spot

NOTE: _____

Place the front wheel on a suitable balancing stand.

FRONT WHEEL AND BRAKE DISCS

- a. Spin the front wheel.
 - b. When the front wheel stops, put an “ X_1 ” mark at the bottom of the wheel.
 - c. Turn the front wheel 90° so that the “ X_1 ” mark is positioned as shown.
 - d. Release the front wheel.
 - e. When the wheel stops, put an “ X_2 ” mark at the bottom of the wheel.
 - f. Repeat steps (d) through (f) several times until all the marks come to rest at the same spot.
 - g. The spot where all the marks come to rest is the front wheel’s heavy spot “X”.

NOTE-

Start with the lightest weight.

- b. Turn the front wheel 90° so that the heavy spot is positioned as shown.
 - c. If the heavy spot does not stay in that position, install a heavier weight.
 - d. Repeat steps (b) and (c) until the front wheel is balanced.

CAUTION:

Disc brake components rarely require disassembly.

Therefore, always follow these preventive measures:

⚠ WARNING

- Never disassemble brake components unless absolutely necessary.
 - If any connection on the hydraulic brake system is disconnected, the entire brake system must be disassembled, drained, cleaned, properly filled, and bled after reassembly.
 - Never use solvents on internal brake components.
 - Use only clean or new brake fluid for cleaning brake components.
 - Brake fluid may damage painted surfaces and plastic parts. Therefore, always clean up any spilt brake fluid immediately.
 - Avoid brake fluid coming into contact with the eyes as it can cause serious injury.
- FIRST AID FOR BRAKE FLUID ENTERING THE EYES:**
- Flush with water for 15 minutes and get immediate medical attention.

EAS00582

REPLACING THE FRONT BRAKE PADS

The following procedure applies to both brake calipers.

NOTE:

When replacing the brake pads, it is not necessary to disconnect the brake hose or disassemble the brake caliper.

NOTE:

- Install the brake master cylinder holder with the "UP" mark ① facing up.
- Align the mating surfaces of the brake master cylinder holder with the punch mark ② on the right handlebar.
- First, tighten the upper bolt, then the lower bolt. There should be 8.2 mm (0.32 in.) for clearance between the right handlebar switch and the brake master cylinder holder.

3. Install:

- copper washers **New**
- brake hose
- union bolt
- brake light switch coupler

 30 Nm (3.0 m•kg, 22 ft•lb)

⚠ WARNING

Proper brake hose routing is essential to insure safe motorcycle operation. Refer to "CABLE ROUTING".

NOTE:

- While holding the brake hose, tighten the union bolt as shown.
- Turn the handlebars to the left and right to make sure the brake hose does not touch other parts (e.g., wire harness, cables, leads). Correct if necessary.

REMOVING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

1. Stand the motorcycle on a level surface.

⚠ WARNING

Securely support the motorcycle so that there is no danger of it falling over.

NOTE:

Place the motorcycle on a suitable stand so that the front wheel is elevated.

2. Remove
 - front wheel
 - front brake caliperRefer to "FRONT WHEEL AND BRAKE DISCS".
3. Remove:
 - front cowling inner panels
 - handlebarRefer to "COWLINGS" in chapter 3.

4. Loosen:

- handlebar pinch bolt ①
- upper bracket pinch bolt ②
- cap bolt ③
- under bracket pinch bolt ④

⚠ WARNING

Before loosening the upper and under bracket pinch bolts, support the front fork leg.

5. Remove:
 - front fork leg

EAS00655

DISASSEMBLING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

1. Loosen:

- nut ①

2. Remove:

- cap bolt ②

(from the damper rod assembly)

3. Remove:

- damper adjusting rod ①
- washer ②
- spacer ③
- fork spring

4. Drain:

- fork oil

NOTE:

Stroke the damper rod ① several times while draining the fork oil.

5. Remove:

- dust seal
- oil seal clip ① (with a flat-head screwdriver)

CAUTION:

Do not scratch the inner tube.

6. Remove:

- damper rod assembly bolt
- copper washer

NOTE:

While holding the damper rod with the damper rod holder ①, loosen the damper rod assembly bolt.

**Damper rod holder

7. Remove:
 - damper rod assembly

8. Remove:
 - inner tube
 - oil seal
 - inner tube bushing

- a. Hold the front fork leg horizontally.
 - b. Slowly push **A** the inner tube into the outer tube and just before it bottoms out, pull **B** the inner tube back quickly.
 - c. Repeat this step until the inner tube separates from the outer tube.

EAS00657 **CHECKING THE FRONT FORK LEGS**

CHECKING THE FRONT FORK LEGS
The following procedure applies to both of the front fork legs.

1. Check:
 - inner tube ①
 - outer tube ②Bends/damage/scratches → Replace.

2. Measure:
• spring free length ②
Out of specification → Replace

Spring free length
249.3 mm (9.81 in)
<Limit> :
244.3 mm (9.62 in)

3. Check:
 - damper rod ①
Damage/wear → Replace.
Obstruction → Blow out all of the oil passages with compressed air.
 - oil lock piece ②
 - damper rod adjusting rod ③
Bends/damage → Replace.

**CAUTION:**

- The front fork leg has a built-in damper adjusting rod and a very sophisticated internal construction, which are particularly sensitive to foreign material.
- When disassembling and assembling the front fork leg, do not allow any foreign material to enter the front fork.

4. Check:

- cap bolt O-ring
Damage/wear → Replace.

EAS00661

ASSEMBLING THE FRONT FORK LEGS

The following procedure applies to both of the front fork legs.

⚠ WARNING

- Make sure the oil levels in both front fork legs are equal.
- Uneven oil levels can result in poor handling and a loss of stability.

NOTE:

- When assembling the front fork leg, be sure to replace the following parts:
 - inner tube bushing
 - outer tube bushing
 - oil seal
 - dust seal
- Before assembling the front fork leg, make sure all of the components are clean.

1. Install:

- inner tube bushing
- oil lock piece
- inner tube ①
- damper rod assembly ②
- damper rod assembly bolt
- copper washer **New**

⚠ WARNING

Always use new copper washers.

CAUTION:

Allow the damper rod assembly to slide slowly down the inner tube ① until it protrudes from the bottom of the inner tube. Be careful not to damage the inner tube.

2. Lubricate:

- inner tube's outer surface

Recommended lubricant
Suspension oil "01" or
equivalent

3. Tighten:

- damper rod assembly bolt ①

5. Install:
- washer
 - oil seal ①
(with the fork seal driver weight and fork seal driver attachment)

CAUTION:

Make sure the numbered side of the oil seal faces up.

- NOTE:**
- Before installing the oil seal, lubricate its lips with lithium-soap-based grease.
 - Lubricate the outer surface of the inner tube with fork oil.
 - Before installing the oil seal, cover the top of the front fork leg with a plastic bag ② to protect the oil seal during installation.

6. Install:
- oil seal clip ①

NOTE:
Adjust the oil seal clip so that it fits into the outer tube's groove.

7. Install:
- dust seal ①
(with the fork seal driver weight)

8. Install:
- rod puller ①

9. Fully compress the front fork leg.

10. Fill:

- front fork leg

(with the specified amount of the recommended fork oil)

Quantity (each front fork leg)

0.49 L (0.43 Imp qt, 0.52 US qt)

Recommended oil

Suspension oil "01"

CAUTION:

- Be sure to use the recommended fork oil. Other oils may have an adverse effect on front fork performance.
- When disassembling and assembling the front fork leg, do not allow any foreign material to enter the front fork.

11. After filling the front fork leg, slowly stroke the damper rod ① up and down (at least ten times) to distribute the fork oil.

NOTE:

Be sure to stroke the damper rod slowly because the fork oil may spurt out.

12. Slowly stroke the inner tube ① up and down to distribute the fork oil once more (1 stroke = about 100 mm (3.94 in)).

NOTE:

Be careful not to stroke the inner tube over 100 mm (3.94 in) as this will cause air to enter. If the inner tube is stroked more than 100 mm (3.94 in), repeat steps (12) and (13).

13. Before measuring the fork oil level, wait ten minutes until the oil has settled and the air bubbles have dispersed.

NOTE:

Be sure to bleed the front fork leg of any residual air.

14. Measure:

- front fork leg oil level @
Out of specification → Correct.

Front fork leg oil level (from the top of the inner tube, with the inner tube fully compressed, and without the spring)

106 mm (4.17 in)

15. Install:

- nut ①
 - fork spring ②
 - washer ③
 - spacer ④
 - washer ⑤
 - damper adjusting rod ⑥
 - cap bolt ⑦

a. Remove the rod puller and rod puller attachment.

b. Install the damper adjusting rod locknut ① and position it as specified ②.

**Damper adjusting rod nut position

e. Install the cap bolt and finger tighten it.

⚠ WARNING

- Before installing the cap bolt, apply grease onto the O-ring.
- Always use a new cap bolt O-ring.

f. Hold the cap bolt and tighten the nut to specification.

HANDLING THE REAR SHOCK ABSORBER AND GAS CYLINDER

⚠ WARNING

This rear shock absorber and gas cylinder contain highly compressed nitrogen gas. Before handling the rear shock absorber or gas cylinder, read and make sure you understand the following information. The manufacturer cannot be held responsible for property damage or personal injury that may result from improper handling of the rear shock absorber and gas cylinder.

- Do not tamper or attempt to open the rear shock absorber or gas cylinder.
- Do not subject the rear shock absorber or gas cylinder to an open flame or any other source of high heat. High heat can cause an explosion due to excessive gas pressure.
- Do not deform or damage the rear shock absorber or gas cylinder in any way. If the rear shock absorber, gas cylinder or both are damaged, damping performance will suffer.

EAS00689

DISPOSING OF A REAR SHOCK ABSORBER AND GAS CYLINDER

Gas pressure must be released before disposing of a rear shock absorber and gas cylinder. To release the gas pressure, drill a 2 ~ 3 mm (0.08 ~ 0.12 in) hole through the gas cylinder at a point 15 ~ 20 mm (0.59 ~ 0.79 in) from its end as shown.

⚠ WARNING

Wear eye protection to prevent eye damage from released gas or metal chips.

Out of specification → Replace the drive chain.

**Ten-link drive chain section limit
(maximum)**

NOTE:

- While measuring the ten-link section, push down on the drive chain to increase its tension.
 - Measure the length between drive chain roller ⑪ and ⑫ as shown.
 - Perform this measurement at two or three different places.

2. Check:
 - drive chain
Stiffness → Clean and lubricate or replace.

**CAUTION:**

This motorcycle has a drive chain with small rubber O-rings ① between the drive chain side plates. Never use high-pressure water or air, steam, gasoline, certain solvents (e.g., benzine), or a coarse brush to clean the drive chain. High-pressure methods could force dirt or water into the drive chain's internals, and solvents will deteriorate the O-rings. A coarse brush can also damage the O-rings. Therefore, use only kerosene to clean the drive chain. Don't soak drive chain in kerosene more than ten minutes. O-ring is damage by kerosine.

4. Check:

- O-rings ①
Damage → Replace the drive chain.
- drive chain rollers ②
Damage/wear → Replace the drive chain.
- drive chain side plates ③
Damage/wear → Replace the drive chain.
Cracks → Replace the drive chain and make sure the battery breather hose is properly routed away from the drive chain and below the swingarm.

5. Lubricate:

- drive chain

Recommended lubricant
Engine oil or chain lubricant
suitable for O-ring chains

6. Check:

- drive sprocket
- rear wheel sprocket
More than 1/4 tooth ② wear → Replace the drive chain sprockets as a set.
Bent teeth → Replace the drive chain sprockets as a set.

REMOVING THE CAMSHAFTS

1. Remove:
 - pickup rotor cover
Refer to “CRANKSHAFT POSITION SENSOR AND PICKUP ROTOR”.

NOTE-

TDC on the compression stroke can be found when the camshaft lobes are turned away from each other.

3. Loosen:
 - camshaft sprocket bolts ①

4. Loosen:
 - cap bolt ①
 5. Remove:
 - timing chain tensioner ②

 6. Remove:
 - timing chain guide (exhaust side)
 - camshaft caps ①
 - dowel pins

CAUTION-

To prevent damage to the cylinder head, camshafts or camshaft caps, loosen the camshaft cap bolts in stages and in a criss-cross pattern, working from the outside in.

7. Remove:

- intake camshaft ①
- exhaust camshaft ②

NOTE: _____
To prevent the timing chain from falling into the crankcase, fasten it with a wire ③.

8. Remove:

- camshaft sprockets

EAS00204

CHECKING THE CAMSHAFTS

1. Check:

- camshaft lobes

Blue discoloration/pitting/scratches → Replace the camshaft.

2. Measure:

- camshaft lobe dimensions ④ and ⑤
Out of specification → Replace the camshaft.

**Camshaft lobe dimension limit**
Intake camshaft

④ 33.45 ~ 33.55 mm
(1.317 ~ 1.321 in)

<Limit>: 33.40 mm (1.315 in)

⑤ 25.12 ~ 25.22 mm

(0.989 ~ 0.993 in)

<Limit>: 25.07 mm (0.987 in)

Exhaust camshaft

④ 32.55 ~ 32.65 mm

(1.282 ~ 1.285 in)

<Limit>: 32.50 mm (1.280 in)

⑤ 25.07 ~ 25.17 mm

(0.987 ~ 0.991 in)

<Limit>: 25.02 mm (0.985 in)

- camshaft runout
Out of specification → Replace.

**Camshaft runout limit
0.06 mm (0.0024 in)**

NOTE:

- Tighten the camshaft cap bolts in stages and in a crisscross pattern, working from the inner caps out.
 - Do not turn the camshaft when measuring the camshaft journal-to-camshaft cap clearance with the Plastigauge®.

**Camshaft cap bolt
10 Nm (1.0 m·kg, 7.2 ft·lb)**

5. Measure:

 - camshaft journal diameter (a)
Out of specification → Replace the cam-shaft.
Within specification → Replace the cylinder head and the camshaft caps as a set.

Camshaft journal diameter
22.967 ~ 22.980 mm
(0.9042 ~ 0.9047 in)

- b. Remove the screwdriver and slowly release the timing chain tensioner rod.
 - c. Make sure that the timing chain tensioner rod comes out of the timing chain tensioner housing smoothly. If there is rough movement, replace the timing chain tensioner.

A decorative horizontal bar consisting of a series of black triangles pointing right, used as a section separator.

3. Check:
• cap bolt

• gasket New

Damage/wear → Replace the defective part(s).

EAS00215

INSTALLING THE CAMSHAFTS

1. Align:
 - “T” mark ① on the pickup rotor
(with the crankcase mating surface ②)

- a. Turn the crankshaft clockwise.
 - b. When piston #1 is at TDC, align the "T" mark
 (a) with the crankcase mating surface (b)

2 Install-

- exhaust camshaft ①
 - intake camshaft ②
(with the camshaft sprocket temporarily tightened)

NOTE:

NOTE:
Make sure the match mark ⑧ on the camshaft sprocket is aligned with the cylinder head edge ⑨.

3. Install:

- dowel pins
- exhaust camshaft caps
- intake camshaft caps

NOTE:

- Make sure each camshaft cap is installed in its original place.
- Make sure the arrow mark **a** on each camshaft cap points towards the right side of the engine.

4. Install:

- camshaft cap bolts

10 Nm (1.0 m·kg, 7.2 ft·lb)

NOTE:

Tighten the camshaft cap bolts in stages and in a crisscross pattern, working from the inner caps out.

I1, 12: Intake side camshaft cap mark

E1, E2: Exhaust side camshaft cap mark

CAUTION:

- Lubricate the camshaft cap bolts with the engine oil.
- The camshaft cap bolts must be tightened evenly or damage to the cylinder head, camshaft caps, and camshafts will result.
- Do not turn the crankshaft when installing the camshaft to avoid damage or improper valve timing.

5. Install:

- timing chain guide (exhaust side)

NOTE:

When installing the timing chain guide, be sure to keep the timing chain as tight as possible on the exhaust side.

WARNING

Always use a new gasket.

- c. Tighten the timing chain tensioner bolts ③ to the specified torque.

**Timing chain tensioner bolt
12 Nm (1.2 m•kg, 8.7 ft•lb)**

- d. Remove the screwdriver, make sure that the timing chain tensioner rod releases, and then tighten the cap bolt to the specified torque.

Cap bolt
7 Nm (0.7 m·kg, 5.1 ft·lb)

7. Turn:
• crankshaft
(several full turns clockwise)

8. Check:

 - “T” mark 
Make sure the “T” mark on the pickup rotor is aligned with the crankcase mating sure face 

- camshaft sprocket match mark (c)
Make sure the match marks on the camshaft sprockets are aligned with the crankcase mating surface (d).

Out of alignment → Adjust.

Refer to the installation steps above.

9. Tighten:
 - camshaft sprocket bolts ①

CAUTION:

Be sure to tighten the camshaft sprocket bolts to the specified torque to avoid the possibility of the bolts coming loose and damaging the engine.

**10. Measure:**

- valve clearance

Out of specification → Adjust.

Refer to "ADJUSTING THE VALVE CLEARANCE" in chapter 3.

REMOVING THE CYLINDER HEAD

1. Remove:
 - cylinder head bolts

NOTE:

- Loosen the bolts in the proper sequence as shown.
 - Loosen each bolt 1/2 of a turn at a time. After all of the bolts are fully loosened, remove them.

EAS00229

CHECKING THE CYLINDER HEAD

1. Eliminate:
 - combustion chamber carbon deposits
(with a rounded scraper)

NOTE:

Do not use a sharp instrument to avoid damaging or scratching:

- spark plug bore threads
 - valve seats

2. Check:
 - cylinder head
Damage/scratches → Replace.
 - cylinder head water jacket
Mineral deposits/rust → Eliminate.
 3. Measure:
 - cylinder head warpage
Out of specification → Resurface the cylinder head.

**Maximum cylinder head warpage
0.05 mm (0.002 in)**

- a. Place a straightedge ① and a thickness gauge ② across the cylinder head.
 - b. Measure the warpage.
 - c. If the limit is exceeded, resurface the cylinder head as follows.
 - d. Place a 400 ~ 600 grit wet sandpaper on the surface plate and resurface the cylinder head using a figure-eight sanding pattern.

NOTE:-

To ensure an even surface, rotate the cylinder head several times.

EAS00233

INSTALLING THE CYLINDER HEAD

1. Install:
 - gasket **New** ①
 - dowel pins ②
2. Install:
 - cylinder head

NOTE: _____

Pass the timing chain through the timing chain cavity.

3. Tighten:

- cylinder head bolts ① ~ ⑩

1st		19 Nm (1.9 m·kg, 14 ft·lb)
2nd		50 Nm (5.0 m·kg, 36 ft·lb)
- cylinder head bolts ⑪, ⑫

	12 Nm (1.2 m·kg, 8.7 ft·lb)
--	-----------------------------

NOTE: _____

- First, tighten the bolts ① ~ ⑩ to approximately 19 Nm (1.9 m·kg, 14 ft·lb) with a torque wrench and then tighten the 50 Nm (5.0 m·kg, 36 ft·lb).
- Lubricate the cylinder head bolts with engine oil.
- Tighten the cylinder head bolts in the proper tightening sequence as shown and torque them in two stages.

4. Install:

- exhaust camshaft
 - intake camshaft
- Refer to "INSTALLING THE CAMSHAFTS".

EAS00238

REMOVING THE VALVES

The following procedure applies to all of the valves and related components.

NOTE:

Before removing the internal parts of the cylinder head (e.g., valves, valve springs, valve seats), make sure the valves properly seal.

1. Remove:

- valve lifter ①
- valve pad ②

NOTE:

Make a note of the position of each valve lifter and valve pad so that they can be reinstalled in their original place.

2. Check:

- valve sealing

Leakage at the valve seat → Check the valve face, valve seat, and valve seat width.
Refer to "CHECKING THE VALVE SEATS".

▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼▼
a. Pour a clean solvent ① into the intake and exhaust ports.

b. Check that the valves properly seal.

NOTE:

There should be no leakage at the valve seat ①.

3. Remove:

- valve cotters ①

NOTE:

Remove the valve cotters by compressing the valve springs with the valve spring compressor ② and the valve spring compressor attachment ③.

Valve spring compressor

- valve spring outer ②
- valve spring inner (intake only) ③
- valve ④
- oil seal ⑤
- lower spring seat ⑥

NOTE: _____

Identify the position of each part very carefully so that it can be reinstalled in its original place.

EAS00239

CHECKING THE VALVES AND VALVE GUIDES

The following procedure applies to all of the valves and valve guides.

1. Measure:

- valve-stem-to-valve-guide clearance

Valve-stem-to-valve-guide clearance =
Valve guide inside diameter (a) –
Valve stem diameter (b)

Out of specification → Replace the valve guide.

Valve-stem-to-valve-guide clearance

Intake

0.010 ~ 0.037 mm
 (0.0004 ~ 0.0015 in)
 <Limit>: 0.08 mm (0.0031 in)

Exhaust

0.025 ~ 0.052 mm
 (0.0010 ~ 0.0020 in)
 <Limit>: 0.10 mm
 (0.0039 in)

2. Replace:

- valve guide

NOTE:

To ease valve guide removal and installation, and to maintain the correct fit, heat the cylinder head to 100°C (212°F) in an oven.

- a. Remove the valve guide with the valve guide remover (1).

- b. Install the new valve guide with the valve guide installer (2) and valve guide remover (1).

- c. After installing the valve guide, bore the valve guide with the valve guide reamer (3) to obtain the proper valve-stem-to-valve-guide clearance.

NOTE:

After replacing the valve guide, reface the valve seat.

3. Eliminate:

- carbon deposits
(from the valve face and valve seat)

4. Check:

- valve face
Pitting/wear → Grind the valve face.

- valve stem end

Mushroom shape or diameter larger than the body of the valve stem → Replace the valve.

5. Measure:

 - valve margin thickness 
Out of specification → Replace the valve.

Valve margin thickness

0.6 ~ 0.8 mm

(0.0236 ~ 0.0315 in)

<Limit>: 0.5 mm (0.02 in)

6. Measure:

 - valve stem runout
Out of specification → Replace the valve.

NOTE:

- When installing a new valve, always replace the valve guide.
 - If the valve is removed or replaced, always replace the oil seal.

Valve stem runout

<Limit>: 0.04 mm (0.0016 in)

EAS00240

CHECKING THE VALVE SEATS

The following procedure applies to all of the valves and valve seats.

1. Eliminate:
 - carbon deposits
(from the valve face and valve seat)
 2. Check:
 - valve seat
Pitting/wear → Replace the cylinder head.

Valve seat width

0.9 ~ 1.1 mm

- a. Apply Mechanic's blueing dye (Dykem) (b) onto the valve face.
 - b. Install the valve into the cylinder head.
 - c. Press the valve through the valve guide and onto the valve seat to make a clear impression.
 - d. Measure the valve seat width.

**NOTE:**

Where the valve seat and valve face contacted one another, the blueing will have been removed.

4. Lap:

- valve face
- valve seat

NOTE:

After replacing the cylinder head or replacing the valve and valve guide, the valve seat and valve face should be lapped.

- a. Apply a coarse lapping compound **(a)** to the valve face.

CAUTION:

Do not let the lapping compound enter the gap between the valve stem and the valve guide.

- b. Apply molybdenum disulfide oil onto the valve stem.
 c. Install the valve into the cylinder head.
 d. Turn the valve until the valve face and valve seat are evenly polished, then clean off all of the lapping compound.

NOTE:

For the best lapping results, lightly tap the valve seat while rotating the valve back and forth between your hands.

- e. Apply a fine lapping compound to the valve face and repeat the above steps.
 f. After every lapping procedure, be sure to clean off all of the lapping compound from the valve face and valve seat.
 g. Apply Mechanic's blueing dye (Dykel) **(b)** onto the valve face.
 h. Install the valve into the cylinder head.
 i. Press the valve through the valve guide and onto the valve seat to make a clear impression.

I1171603

I1171902

- j. Measure the valve seat width © again. If the valve seat width is out of specification, reface and lap the valve seat.

EAS00241

CHECKING THE VALVE SPRINGS

The following procedure applies to all of the valve springs.

- ## 1. Measure:

- valve spring free length (a)
Out of specification → Replace the valve spring.

Valve spring free length

Intake valve spring (inner)

35.7 mm (1.41 in)

<Limit>: 33.9 mm (1.33 in)

Intake valve spring (outer)

40.3 mm (1.59 in)

<Limit>: 38.3 mm (1.50 in)

Exhaust valve spring

41.7 mm (1.64 in)

<Limit>: 39.6 mm (1.56 in)

2. Measure:

- compressed valve spring force @
Out of specification → Replace the valve
spring.

b) Installed length

- Compressed valve spring force (installed)**
 - Intake valve spring (inner)**
 - 61.5 ~ 70.7 N
 - (6.27 ~ 7.21 kg,
13.83 ~ 15.89 lb)
 - Intake valve spring (outer)**
 - 139.1 ~ 160.1 N

 - Exhaust valve spring**
 - 160 ~ 184 N
 - (16.32 ~ 18.76 kg,
35.97 ~ 41.36 lb)

3. Measure:

- valve spring tilt ①

Out of specification → Replace the valve spring.

**Spring tilt limit**

Intake valve spring (inner)

$2.5^\circ/1.6\text{ mm (}0.06\text{ in)}$

(outer)

$2.5^\circ/1.8\text{ mm (}0.07\text{ in)}$

INSTALLING THE VALVES

The following procedure applies to all of the valves and related components.

1. Deburr:

- valve stem end
(with an oil stone)

2. Lubricate:

- valve stem ①
- valve stem seal ②
(with the recommended lubricant)

**Recommended lubricant**

Molybdenum disulfide oil

3. Install:

- valve ①
- lower spring seat ②
- valve stem seal ③
- valve spring inner (intake only) ④
- valve spring outer ⑤
- upper spring seat ⑥
(into the cylinder head)

**NOTE:**

- Make sure that each valve is installed in its original place.
- Install the valve springs with the larger pitch ① facing up.

(b) Smaller pitch

**4. Install:**

- valve cotters ①

NOTE:

Install the valve cotters by compressing the valve springs with the valve spring compressor ② and the valve spring compressor attachment ③.

CAUTION:

Hitting the valve tip with excessive force could damage the valve.

6. Install:

- valve pad ①
- valve lifter ②

NOTE:

- Lubricate the valve lifter and valve pad with molybdenum disulfide oil.
- The valve lifter must move smoothly when rotated with a finger.
- Each valve lifter and valve pad must be reinstalled in its original position.

The following procedure applies to all of the connecting rods.

**CAUTION:**

Do not interchange the big end bearings and connecting rods. To obtain the correct crankshaft-pin-to-big-end-bearing clearance and prevent engine damage, the big end bearings must be installed in their original positions.

- Clean the big end bearings, crankshaft pins, and the inside of the connecting rods halves.
- Install the big end upper bearing into the connecting rod and the big end lower bearing into the connecting rod cap.

NOTE:

Align the projections (a) on the big end bearings with the notches (b) in the connecting rod and connecting rod cap.

- Put a piece of Plastigauge® (1) on the crankshaft pin.
- Assemble the connecting rod halves.

NOTE:

- Do not move the connecting rod or crankshaft until the clearance measurement has been completed.
- Lubricate the bolt threads and nut seats with molybdenum disulfide grease.
- Make sure that the "Y" mark (C) on the connecting rod faces towards the left side of the crankshaft.
- Make sure that the characters (d) on both the connecting rod and connecting rod cap are aligned.

- e. Tighten the connecting rod nuts.

Connecting rod nut

15 Nm (1.5 m•kg, 11 ft•lb) + 150°

- f. Replace the connecting rod bolts and nuts with new ones.

CAUTION:

Tighten the connecting rod bolts using the plastic-region tightening angle method. Always install new bolts and nuts.

- g. Clean the connecting rod bolts and nuts.
h. Tighten the connecting rod nuts.
i. Put a mark① on the corner of the connecting rod nut ② and the connecting rod ③.

- j. Tighten the nut further to reach the specified angle (150°).

⚠ WARNING

When the nut is tightened more than the specified angle, do not loosen the nut and then retighten it.

Replace the bolt with a new one and perform the procedure again.

CAUTION:

- Do not use a torque wrench to tighten the nut to the specified angle.
- Tighten the nut until it is at the specified angles.

NOTE:

When using a hexagonal nut, note that the angle from one corner to another is 60°

11630702

- k. Remove the connecting rod and big end bearings.

Refer to "REMOVING THE CONNECTING RODS".

- l. Measure the compressed Plastigauge® width on the crankshaft pin.
If the crankshaft-pin-to-big-end-bearing clearance is out of specification, select replacement big end bearings.

2. Select:

- big end bearings (P1 ~ P4)

NOTE:

- The numbers **A** stamped into the crankshaft web and the numbers **①** on the connecting rods are used to determine the replacement big end bearing sizes.
- “P1” ~ “P4” refer to the bearings shown in the crankshaft illustration.

For example, if the connecting rod “P₁” and the crankshaft web “P₁” numbers are “5” and “2” respectively, then the bearing size for “P1” is:

**“P₁” (connecting rod) – “P₁” (crankshaft) =
5 – 2 = 3 (brown)**

INSTALLING THE CONNECTING ROD AND PISTON

The following procedure applies to all of the connecting rods and pistons.

1. Install:

- top ring ①
- 2nd ring ②
- upper oil ring rail ③
- oil ring expander ④
- lower oil ring rail ⑤

NOTE:

Be sure to install the piston rings so that the manufacturer's marks or numbers **(a)** face up.

2. Install:

- piston ①
(onto the respective connecting rod ②)
- piston pin ③
- piston pin clip **New** ④

NOTE:

- Apply engine oil onto the piston pin.
- Make sure that the "Y" mark ③ on the connecting rod faces left when the arrow mark ④ on the piston is pointing up. Refer to the illustration.
- Reinstall each piston into its original cylinder (numbering order starting from the left: #1 to #4).

3. Lubricate:

- piston
- piston rings
- cylinder
(with the recommended lubricant)

Recommended lubricant

6. Install:
 - big end bearings
 - connecting rod assembly
(into the cylinder and onto the crankshaft pin)
 - connecting rod cap
(onto the connecting rod)

NOTE:

- Align the projections on the big end bearings with the notches in the connecting rods and connecting rod caps.
 - Be sure to reinstall each big end bearing in its original place.
 - While compressing the piston rings with one hand, install the connecting rod assembly into the cylinder with the other hand.
 - Make sure that the “Y” marks **(a)** on the connecting rods face towards the left side of the crankshaft.
 - Make sure that the characters **(b)** on both the connecting rod and connecting rod cap are aligned.

7. Align:
 - bolt heads
(with the connecting rod caps)
 8. Tighten:
 - connecting rod nuts

- a. Replace the connecting rod bolts and nuts with new ones.

CAUTION:

Tighten the connecting rod bolts using the plastic-region tightening angle method. Always install new bolts and nuts.

- b. Clean the connecting rod bolts and nuts.
 - c. Tighten the connecting rod nuts.
 - d. Put a mark ① on the corner of the connecting rod nut ② and the connecting rod ③.

- e. Tighten the nut further to reach the specified angle (150°).

⚠ WARNING

When the nut is tightened more than the specified angle, do not loosen the nut and then retighten it.

Replace the bolt with a new one and perform the procedure again.

CAUTION:

- Do not use a torque wrench to tighten the nut to the specified angle.
- Tighten the nut until it is at the specified angles.

NOTE:

When using a hexagonal nut, note that the angle from one corner to another is 60° .

(0.0013 ~ 0.0023 in)

CAUTION:

Do not interchange the crankshaft journal bearings. To obtain the correct crankshaft-journal-to-crankshaft-journal-bearing clearance and prevent engine damage, the crankshaft journal bearings must be installed in their original positions.

- c. Install the crankshaft journal upper bearings ① and the crankshaft into the upper crankcase.

NOTE: _____
Align the projections ① on the crankshaft journal upper bearings with the notches ② in the upper crankcase.

- d. Put a piece of Plastigauge® ② on each crankshaft journal.

NOTE: _____
Do not put the Plastigauge® over the oil hole in the crankshaft journal.

- e. Install the crankshaft journal lower bearings ① into the lower crankcase and assemble the crankcase halves.

NOTE: _____
• Align the projections ① of the crankshaft journal lower bearings with the notches ② in the lower crankcase.
• Do not move the crankshaft until the clearance measurement has been completed.

- f. Tighten the bolts to specification in the tightening sequence cast on the crankcase.

- g. Remove the lower crankcase and the crankshaft journal lower bearings.
 - h. Measure the compressed Plastigauge® width © on each crankshaft journal. If the crankshaft-journal-to-crankshaft-journal-bearing clearance is out of specification, select replacement crankshaft journal bearings.

2. Select:

- crankshaft journal bearings (J1 ~ J5)

NOTE: -

- The numbers **A** stamped into the crankshaft web and the numbers **①** stamped into the lower crankcase are used to determine the replacement crankshaft journal bearing sizes.
 - “J₁ ~ J₅” refer to the bearings shown in the crankshaft illustration.
 - If “J₁ ~ J₅” are the same, use the same size for all of the bearings.
 - If the size is the same for all “J₁ to J₅” one digit for that size is indicated. (Crankcase side only)

For example, if the crankcase "J₁" and crank-shaft web "J₁" numbers are "6" and "2" respectively, then the bearing size for "J₁" is:

"J₁" (crankcase) - "J₁" (crankshaft web) - 1 = 6 - 2 - 1 = 3 (brown)

**INSTALLING THE WATER PUMP****1. Install:**

- water pump assembly

12 Nm (1.2 m·kg, 8.7 ft·lb)

NOTE: _____

Align the projection **a** at the oil pump shaft and water pump shaft groove **b**.

**2. Install:**

- water pump outlet hose **1**
- water pump inlet hose **2**

NOTE: _____

- Install the inlet hose with yellow **a** mark positioned outside.
- Install the hose clamp with its screw head pointed to the inner side not to contact with the cowling.

3. Fill:

- coolant

ECU'S SELF-DIAGNOSTIC FUNCTION

The ECU is equipped with a self-diagnostic function in order to ensure that the engine control system is operating normally. If this function detects a malfunction in the system, it immediately operates the engine under substitute characteristics and illuminates the engine trouble warning light to alert the rider that a malfunction has occurred in the system. Once a malfunction has been detected, a fault code is stored in the memory of the ECU.

- To inform the rider that the fuel injection system is not functioning, the engine trouble warning light flashes when the start switch is being pushed to start the engine.
- If a malfunction is detected in the system by the self-diagnostic function, this mode provides an appropriate substitute characteristic operation, and alerts the rider of the detected malfunction by illuminating a engine trouble warning light.
- After the engine has been stopped, the lowest fault code number appears on the clock LCD. Once a fault code has been displayed, it remains stored in the memory of the ECU until it is deleted.

Checking for a detective engine trouble warning light bulb

The engine trouble warning light comes on for 1.4 seconds after the main switch has been turned "ON" and when the start switch is being pushed. If the warning light does not come on under these conditions, the warning light bulb may be detective.

ALTERNATE INSTRUCTIONS OPERATION CONTROL (FAIL-SAFE ACTION)

If the ECU detects an abnormal signal from a sensor while the vehicle is being driven, the ECU illuminates the engine trouble warning light and provides the engine with alternate operating instructions that are appropriate for the type of malfunction.

When an abnormal signal is received from a sensor, the ECU processes the specified values that are programmed for each sensor in order to provide the engine with alternate operating instructions that enable the engine to continue to operate or stop operating, depending on the conditions.

The ECU takes fail-safe actions in two ways: one in which the sensor output is set to a prescribed value, and the other in which the ECU directly operates an actuator. Details on the fail-safe actions are given in the table below.

FAIL-SAFE ACTIONS TABLE

Fault Code No.	Item	Symptom	Fail-safe action	Engine startability	Vehicle drivability
11	Cylinder identification sensor	No normal signals from the cylinder identification sensor are received when the engine is started or while the motor cycle travels.	Continues to operate the engine based on the results of the cylinder identification that existed up to that point.	Unable	Able

DIAGNOSTIC MODE

Setting the diagnostic mode

1. Turn the main switch to "OFF" and set the engine stop switch to "ON".
2. Disconnect the wire harness coupler from the fuel pump.
3. Simultaneously press and hold the "SELECT" and "RESET" buttons, turn the main switch to "ON", and continue to press the buttons for 8 seconds or more.

NOTE: _____

- All displays on the meter disappear except the clock and tripmeter displays.
- "DIAG" appears on the clock LCD.

4. Press the "SELECT" button to select the CO adjustment mode "CO" or the diagnostic mode "DIAG".
5. After selecting "DIAG", simultaneously press the "SELECT" and "RESET" buttons for 2 seconds or more to execute the selection.
6. Set the engine stop switch to "OFF".
7. Select the diagnostic code number that applies to the item that was verified with the fault code number by pressing the "SELECT" and "RESET" buttons.

NOTE: _____

- The diagnostic code number appears on the clock LCD (01-70).
- To decrease the selected diagnostic code number, press the "RESET" button. Press the "RESET" button for 1 second or longer to automatically decrease the diagnostic code numbers.
- To increase the selected diagnostic code number, press the "SELECT" button. Press the "SELECT" button for 1 second or longer to automatically increase the diagnostic code numbers.

8. Verify the operation of the sensor or actuator.
 - Sensor operation
The data representing the operating conditions of the sensor appears on the trip LCD.
 - Actuator operation
Set the engine stop switch to "ON" to operate the actuator.
* If the engine stop switch is set to "ON", set it to "OFF", and then set it to "ON" again.
9. Turn the main switch to "OFF" to cancel the diagnostic mode.

Diagnostic mode table

Switch the meter display from the regular mode to the diagnostic mode. To switch the display, refer to "DIAGNOSTIC MODE".

NOTE:

- Check the intake temperature and coolant temperature as close as possible to the intake temperature sensor and the coolant temperature sensor respectively.
- If it is not possible to check the atmospheric pressure with an atmospheric pressure gauge, determine the atmospheric pressure by using 760 mmHg as the standard.
- If it is not possible to check the intake temperature, use the ambient temperature as reference.

AIR INDUCTION SYSTEM

AIR INJECTION

The air induction system burns unburned exhaust gases by injecting fresh air (secondary air) into the exhaust port, reducing the emission of hydrocarbons.

When there is negative pressure at the exhaust port, the reed valve opens, allowing secondary air to flow into the exhaust port. The required temperature for burning the unburned exhaust gases is approximately 600 to 700°C (1112 to 1292°F).

EAS0097

AIR CUT-OFF VALVE

The air cut-off valve is controlled by the signals from the ECU in accordance with the combustion conditions. Ordinarily, the air cut-off valve opens to allow the air to flow during idle and closes to cut-off the flow when the motorcycle is being driven. However, if the coolant temperature is below the specified value, the air cut-off valve remains open and allows the air to flow into the exhaust pipe until the temperature becomes higher than the specified value.

"○—○" indicates a continuity of electricity between switch terminals (i.e., a closed circuit at the respective switch position).

The example illustration on the left shows that:

There is continuity between red and brown/blue when the switch is set to "ON".

EAS00731

CHECKING THE SWITCHES

Check each switch for damage or wear, proper connections, and also for continuity between the terminals. Refer to "CHECKING SWITCH CONTINUITY".

Damage/wear → Repair or replace.

Improperly connected → Properly connect.

Incorrect continuity reading → Replace the switch.

EAS00732

CHECKING THE BULBS AND BULB SOCKETS

Check each bulb and bulb socket for damage or wear, proper connections, and also for continuity between the terminals.

Damage/wear → Repair or replace the bulb, bulb socket or both.

Improperly connected → Properly connect.

No continuity → Repair or replace the bulb, bulb socket or both.

TYPES OF BULBS

The bulbs used on this motorcycle are shown in the illustration on the left.

- Bulbs Ⓐ and Ⓑ are used for the headlights and usually use a bulb holder that must be detached before removing the bulb. The majority of these types of bulbs can be removed from their respective socket by turning them counterclockwise.
- Bulb Ⓒ is used for turn signal and tail/brake lights and can be removed from the socket by pushing and turning the bulb counterclockwise.
- Bulbs Ⓓ and Ⓔ are used for meter and indicator lights and can be removed from their respective socket by carefully pulling them out.

CHECKING THE CONDITION OF THE BULBS

The following procedure applies to all of the bulbs.

1. Remove:
 - bulb

⚠️ WARNING

Since the headlight bulb gets extremely hot, keep flammable products and your hands away from the bulb until it has cooled down.

CAUTION:

- Be sure to hold the socket firmly when removing the bulb. Never pull the lead, otherwise it may be pulled out of the terminal in the coupler.
 - Avoid touching the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the life of the bulb, and the luminous flux will be adversely affected. If the headlight bulb gets soiled, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

2. Check:
 - bulb (for continuity)
(with the pocket tester)
No continuity → Replace.

Pocket tester

NOTE:-

Before checking for continuity, set the pocket tester to "0" and to the "Ω × 1" range.

CHECKING THE CONDITION OF THE BULB SOCKETS

The following procedure applies to all of the bulb sockets.

1. Check:
 - bulb socket (for continuity)
(with the pocket tester)
No continuity → Replace.

Pocket tester

NOTE:

Check each bulb socket for continuity in the same manner as described in the bulb section; however, note the following.

- a. Install a good bulb into the bulb socket.
 - b. Connect the pocket tester probes to the respective leads of the bulb socket.
 - c. Check the bulb socket for continuity. If any of the readings indicate no continuity, replace the bulb socket.

CHECKING THE LEDs

The following procedures applies to all of the LEDs.

1. Check:
 - LED (for proper operation)
Improper operation → Replace

- a. Disconnect the meter assembly coupler (meter assembly side).
 - b. Connect two jumper leads ① from the battery terminals to the respective coupler terminal as shown.

WARNING

- A wire that is used as a jumper lead must have at least the same capacity of the battery lead, otherwise the jumper lead may burn.
 - This check is likely to produce sparks, therefore, make sure no flammable gas or fluid is in the vicinity.

- c. When the jumper leads are connected to the terminals the respective LED should illuminate.
Does not light → Replace the meter assembly.

STARTING CIRCUIT CUT-OFF SYSTEM OPERATION

If the engine stop switch is set to “” and the main switch is set to “ON” (both switches are closed), the starter motor can only operate if at least one of the following conditions is met:

- The transmission is in neutral (the neutral switch is closed).
- The clutch lever is pulled to the handlebar (the clutch switch is closed) and the sidestand is up (the sidestand switch is closed).

The starting circuit cut-off relay prevents the starter motor from operating when neither of these conditions has been met. In this instance, the starting circuit cut-off relay is open so current cannot reach the starter motor. When at least one of the above conditions has been met the starting circuit cut-off relay is closed and the engine can be started by pressing the starter switch.

Negative tester probe → black ②

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of blue/red ① on the license light coupler (wire harness side).
- Is the voltage within specification?

This circuit is OK.

The wiring circuit from the main switch to the license light coupler is faulty and must be repaired.

5. The turn signal/position light fails to come on.

1. Turn signal/position light bulb and socket

- Check the turn signal/position light bulb and socket for continuity.
Refer to "CHECKING THE BULBS AND BULB SOCKETS".
- Are the turn signal/position light bulb and socket OK?

Replace the turn signal/position light bulb, socket or both.

2. Voltage

- Connect the pocket tester (DC 20 V) to the turn signal/position light couplers (wire harness side) as shown.

Tester positive probe → blue ①
Tester negative probe → black ②

- Turn the main switch to "ON".
- Measure the voltage (12 V) of blue ① on the turn signal/position light couplers (wire harness side).
- Is the voltage within specification?

This circuit is OK.

The wiring circuit from the main switch to the turn signal/position light connectors is faulty and must be repaired.

TROUBLESHOOTING

- Any of the following fail to light: turn signal light, brake light or an indicator light.
- The horn fails to sound.

Check:

1. main, ignition and signaling fuses
2. battery
3. main switch
4. wiring connections
(of the entire signaling system)

NOTE:

- Before troubleshooting, remove the following part(s):
 1. seat
 2. fuel tank
 3. bottom cowling
 4. side cowlings
 5. rear cowling
- Troubleshoot with the following special tool(s).

EAS00738

1. Main, ignition and signaling fuses

- Check the main, ignition and signaling fuses for continuity.
Refer to "CHECKING THE FUSES" in chapter 3.
- Are the main, ignition and signaling fuses OK?

YES

NO

Replace the fuse(s).

EAS00739

2. Battery

- Check the condition of the battery.
Refer to "CHECKING AND CHARGING THE BATTERY" in chapter 3.

Minimum open-circuit voltage
12.8 V or more at 20°C (68°F)

- Is the battery OK?

YES

NO

- Clean the battery terminals.
- Recharge or replace the battery.

EAS00749

3. Main switch

- Check the main switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the main switch OK?

YES

NO

Replace the main switch.

4. Wiring

- Check the entire signaling system's wiring.
Refer to "CIRCUIT DIAGRAM".
- Is the signaling system's wiring properly connected and without defects?

YES

NO

Check the condition of each of the signaling system's circuits.
Refer to "CHECKING THE LIGHTING SYSTEM".

Properly connect or repair the signaling system's wiring.

EAS00796

CHECKING THE SIGNALING SYSTEM

1. The horn fails to sound.

1. Horn switch

- Check the horn switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the horn switch OK?

YES

NO

Replace the left handlebar switch.

2. Voltage

- Connect the pocket tester (DC 20 V) to the horn connector at the horn terminal as shown.

Positive tester probe → black/white ①
Negative tester probe → ground

- Turn the main switch to "ON".
- Push the horn switch.
- Measure the voltage (DC 12 V) of black/white at the horn terminal.
- Is the voltage within specification?

YES

NO

The wiring circuit from the main switch to the horn connector is faulty and must be repaired.

3. Horn

- Disconnect the black connector at the horn terminal.
- Connect a jumper lead ① to the horn terminal and ground the jumper lead.
- Turn the main switch to "ON".
- Push the horn switch.
- Does the horn sound?

YES

NO

The horn is OK.

Replace the horn.

EAS00797

2. The tail/brake light fails to come on.

1. Tail/brake light (LEDs)

- Check the tail/brake light for continuity. Refer to "CHECKING THE LEDs"
- Are the tail/brake light OK?

YES

NO

Replace the tail/brake light assembly.

2. Brake light switches

- Check the brake light switches for continuity. Refer to "CHECKING THE SWITCHES".
- Is the brake light switch OK?

YES

NO

Replace the brake light switch.

3. Voltage

- Connect the pocket tester (DC 20 V) to the tail/brake light coupler (wire harness side) as shown.

Positive tester probe → yellow ①
Negative tester probe → black ②

- Turn the main switch to "ON".
- Pull in the brake lever or push down on the brake pedal.
- Measure the voltage (DC 12 V) of yellow ① on the tail/brake light coupler (wire harness side).
- Is the voltage within specification?

↓ YES ↓ NO

This circuit is OK.

The wiring circuit from the main switch to the tail/brake light coupler is faulty and must be repaired.

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) on brown ① at the turn signal relay coupler (wire harness side).
- Is the voltage within specification?

↓ YES ↓ NO

The wiring circuit from the main switch to the turn signal relay coupler is faulty and must be repaired.

3. The turn signal/position light, turn signal indicator or both fail to blink.

1. Turn signal indicator light (LEDs)

- Check the turn signal indicator light for continuity.
Refer to "CHECKING THE LEDs"
- Are the turn signal indicator light OK?

↓ YES ↓ NO

Replace the meter assembly.

4. Voltage

- Connect the pocket tester (DC 20 V) to the turn signal relay coupler (wire harness side) as shown.

Positive tester probe → brown/white ①
Negative tester probe → ground

2. Turn signal switch

- Check the turn signal switch for continuity.
Refer to "CHECKING THE SWITCHES".
- Is the turn signal switch OK?

↓ YES ↓ NO

Replace the left handlebar switch.

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) on brown/white ① at the turn signal relay coupler (wire harness side).
- Is the voltage within specification?

↓ YES ↓ NO

The turn signal relay is faulty and must be replaced.

3. Voltage

- Connect the pocket tester (DC 20 V) to the turn signal relay coupler (wire harness side) as shown.

Positive tester probe → brown ①
Negative tester probe → ground

5. Voltage

- Set the turn signal switch to "←" or "→".
- Measure the voltage (DC 12 V) of the chocolate ① or dark green ② at the turn signal light connector (wire harness side).
- Is the voltage within specification?

YES

This circuit is OK.

NO

The wiring circuit from the turn signal switch to the turn signal light connector is faulty and must be repaired.

EAS00801

4. The neutral indicator light fails to come on.

1. Neutral indicator light (LEDs)

- Check the neutral indicator light for continuity. Refer to "CHECKING THE LEDs"
- Are the neutral indicator light OK?

YES

NO
Replace the meter assembly.

2. Neutral switch

- Check the neutral switch for continuity. Refer to "CHECKING THE SWITCHES".
- Is the neutral switch OK?

YES

NO
Replace the neutral switch.

3. Voltage

- Connect the pocket tester (DC 20 V) to the meter assembly coupler (wire harness side) as shown.

Positive tester probe → brown ①
Negative tester probe → ground

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of brown at the meter assembly coupler (wire harness side).
- Is the voltage within specification?

YES

This circuit is OK.

NO

The wiring circuit from the main switch to the meter assembly coupler is faulty and must be repaired.

EAS00802

5. The oil level warning light fails to come on.

1. Oil level warning light (LEDs)

- Check the oil level warning light for continuity.
Refer to "CHECKING THE LEDs"
- Are the oil level warning light OK?

2. Oil level switch

- Drain the engine oil and remove the oil level switch from the oil pan.
- Connect the pocket tester ($\Omega \times 100$) to the oil level switch as shown.

**Positive tester probe → Connector ① (white)
Negative tester probe → Body earth ②**

- Measure the oil level switch resistance.

Oil level switch resistance

1	484 ~ 536 Ω at 20°C (68°F)
2	114 ~ 126 Ω at 20°C (68°F)

- Is the oil level switch OK?

3. Voltage

- Connect the pocket tester (DC 20 V) to the meter assembly coupler (wire harness side) as shown.

**Positive tester probe → black/red ①
Negative tester probe → black/white ②**

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of black/red ① and black/white ② at the meter assembly coupler.
- Is the voltage within specification?

EAS00803

6. The fuel level warning light fails to come on.

1. Fuel level warning light (LEDs)

- Check the fuel level warning light for continuity.
Refer to "CHECKING THE LEDs"
- Are the fuel level warning light OK?

2. Fuel sender

- Drain the fuel from the fuel tank and remove the fuel pump from the fuel tank.
- Disconnect the fuel sender coupler from the wire harness.
- Connect the pocket tester ($\Omega \times 1$) to the fuel sender as shown.

Positive tester probe → green/white ①
Negative tester probe → black ②

- Check the fuel sender for continuity.
- Is the fuel sender OK?

YES

NO

Replace the fuel pump assembly.

3. Voltage

- Connect the pocket tester (DC 20 V) to the meter assembly coupler (wire harness side) as shown.

Positive tester probe → green/white ①
Negative tester probe → black/white ②

- Turn the main switch to "ON".
- Measure the voltage (DC 12 V) of green/white ① and black/white ② at the meter assembly coupler.
- Is the voltage within specification?

YES

NO

This circuit is OK.

The wiring circuit from the main switch to the meter assembly coupler is faulty and must be repaired.

EAS00806

7. The speedometer fails to operate.

1. Multi-function meter LEDs

- Check the multi-function meter LEDs for continuity.
Refer to "CHECKING THE LEDs".
- Is the multi-function meter LEDs OK?

YES

NO

Replace the meter assembly.

2. Speed sensor

- Connect the pocket tester (DC 20 V) to the speed sensor coupler (wire harness side) as shown.

Positive tester probe → white/yellow ①
Negative tester probe → blue ②

- Turn the main switch to "ON".
- Elevate the rear wheel and slowly rotate it.
- Measure the voltage (DC 5 V) of blue and white/yellow. With each full rotation of the rear wheel, the voltage reading should cycle from 0.6 V to 4.8 V to 0.6 V to 4.8 V.
- Does the voltage reading cycle correctly?

YES

NO

Replace the speed sensor.

3. Voltage

- Connect the pocket tester (DC 20 V) to the meter assembly coupler (wire harness side) as shown.

Positive tester probe → yellow/blue ①
Negative tester probe → black/white ②

- Turn the main switch to "ON".
- Elevate the rear wheel and slowly rotate it.
- Measure the voltage (DC 5 V) of yellow/blue ① on the meter assembly coupler (wire harness side).
- Is the voltage within specification?

NO

This circuit is OK.

YES

Replace the meter assembly.

- Disconnect the radiator fan motor coupler from the wire harness.
- Connect the battery (DC 12 V) as shown.

Positive battery lead → blue ①
Negative battery lead → black ②

- Does the radiator fan motor turn?

↓ YES

↓ NO

The radiator fan motor is faulty and must be replaced.

5. Radiator fan motor relay

- Disconnect the radiator fan motor relay from the wire harness.
- Connect the pocket tester ($\Omega \times 1$) and battery (12 V) to the radiator fan motor terminal as shown.
- Check the radiator fan motor of continuity.

Battery positive terminal → red/white ①
Battery negative terminal → green/yellow ②

Tester positive probe → brown/green ③
Tester negative probe → blue ④

- Does the radiator fan motor relay have continuity between brown/green and blue?

↓ YES

↓ NO

Replace the radiator fan motor relay.

6. Coolant temperature sensor

- Remove the coolant temperature sensor.
- Connect the pocket tester ($\Omega \times 1k$) to the coolant temperature sensor ① as shown.
- Immerse the coolant temperature sensor in a container filled with coolant ②.

NOTE:

Make sure the coolant temperature sensor terminals do not get wet.

- Place a thermometer ③ in the coolant.
- Slowly heat the coolant, and then let it cool to the specified temperature indicated in the table.
- Check the coolant temperature sensor for continuity at the temperatures indicated in the table.

**Coolant temperature sensor resistance**

0°C (32°F): $5.21 \sim 6.37 \text{ k}\Omega$
 80°C (176°F): $0.29 \sim 0.35 \text{ k}\Omega$

WARNING

- Handle the coolant temperature sensor with special care.
- Never subject the coolant temperature sensor to strong shocks. If the coolant temperature sensor is dropped, replace it.

Coolant temperature sensor
20 Nm (2.0 m \cdot kg, 14 ft \cdot lb)
Three bond sealock[®]10

- Does the coolant temperature sensor operate properly?

YES

NO

Replace the coolant temperature sensor.

CHECKING THE FUEL PUMP

WARNING

Gasoline is extremely flammable and under certain circumstances there can be a danger of an explosion or fire. Be extremely careful and note the following points:

- Stop the engine before refueling.
 - Do not smoke, and keep away from open flames, sparks, or any other source of fire.
 - If you do accidentally spill gasoline, wipe it up immediately with dry rags.
 - If gasoline touches the engine when it is hot, a fire may occur. Therefore, make sure the engine is completely cool before performing the following test.

Positive battery lead → red/blue ②
Negative battery lead → black ③

- e. If fuel flows out of the fuel hose, the fuel pump is OK. If fuel does not flow, replace the fuel pump.

SELF-DIAGNOSIS

The YZF-R6 features a self-diagnosing system for the following circuit(-s):

- Fuel sender
- Oil level switch

If any of these circuits are defective, their respective condition codes will be displayed on the warning light when the main switch is turned to "ON" (irrespective of whether the engine is running or not)

TROUBLESHOOTING

NOTE:

The following guide for troubleshooting does not cover all the possible causes of trouble. It should be helpful, however, as a guide to basic troubleshooting. Refer to the relative procedure in this manual for checks, adjustments, and replacement of parts.

STARTING FAILURES

ENGINE

Cylinder(s) and cylinder head(s)

- Loose spark plug
- Loose cylinder head or cylinder
- Damaged cylinder head gasket
- Worn or damaged cylinder
- Incorrect valve clearance
- Improperly sealed valve
- Incorrect valve-to-valve-seat contact
- Incorrect valve timing
- Faulty valve spring
- Seized valve

Piston(s) and piston ring(s)

- Improperly installed piston ring
- Damaged, worn or fatigued piston ring
- Seized piston ring
- Seized or damaged piston

Air filter

- Improperly installed air filter
- Clogged air filter element

Crankcase and crankshaft

- Improperly assembled crankcase
- Seized crankshaft

FUEL SYSTEM

Fuel tank

- Empty fuel tank
- Clogged fuel filter
- Clogged fuel tank drain hose
- Clogged rollover valve
- Clogged rollover valve hose
- Deteriorated or contaminated fuel

Fuel pump

- Faulty fuel pump
- Faulty fuel pump relay

Throttle body (-ies)

- Deteriorated or contaminated fuel
- Sucked-in air

ELECTRICAL SYSTEMS

Battery

- Discharged battery
- Faulty battery

Fuse(s)

- Blown, damaged or incorrect fuse
- Improperly installed fuse

Spark plug(s)

- Incorrect spark plug gap
- Incorrect spark plug heat range
- Fouled spark plug
- Worn or damaged electrode
- Worn or damaged insulator

Ignition coil(s)

- Cracked or broken ignition coil body
- Broken or shorted primary or secondary coils

Ignition system

- Faulty ECU
- Faulty crankshaft position sensor
- Faulty cylinder identification sensor

Switches and wiring

- Faulty main switch
- Faulty engine stop switch
- Broken or shorted wiring
- Faulty neutral switch
- Faulty start switch
- Faulty sidestand switch
- Faulty clutch switch
- Improperly grounded circuit
- Loose connections

Starting system

- Faulty starter motor
- Faulty starter relay
- Faulty starting circuit cut-off relay
- Faulty starter clutch

- Damaged or loose throttle body joint
- Improperly synchronized throttle bodies
- Improperly adjusted engine idling speed (throttle stop screw)
- Improper throttle cable free play
- Flooded throttle body
- Faulty air induction system

ELECTRICAL SYSTEMS

Battery

- Discharged battery
- Faulty battery

Spark plug(s)

- Incorrect spark plug gap
- Incorrect spark plug heat range
- Fouled spark plug
- Worn or damaged electrode
- Worn or damaged insulator

Ignition coil(s)

- Broken or shorted primary or secondary coils
- Cracked or broken ignition coil

Ignition system

- Faulty ECU
- Faulty crankshaft position sensor
- Faulty cylinder identification sensor

FAULTY GEAR SHIFTING

SHIFTING IS DIFFICULT

Refer to "CLUTCH DRAGS".

SHIFT PEDAL DOES NOT MOVE

Shift shaft

- Improperly adjusted shift rod
- Bent shift shaft.

Shift drum and shift forks

- Foreign object in a shift drum groove
- Seized shift fork
- Bent shift fork guide bar

Transmission

- Seized transmission gear
- Foreign object between transmission gears
- Improperly assembled transmission

JUMPS OUT OF GEAR

Shift shaft

- Incorrect shift pedal position
- Improperly returned stopper lever

Shift forks

- Worn shift fork

Shift drum

- Incorrect axial play
- Worn shift drum groove

Transmission

- Worn gear dog

FAULTY CLUTCH

CLUTCH SLIPS

Clutch

- Improperly assembled clutch
- Improperly adjusted clutch cable
- Loose or fatigued clutch spring
- Worn friction plate
- Worn clutch plate

Engine oil

- Incorrect oil level
- Incorrect oil viscosity (low)
- Deteriorated oil

CLUTCH DRAGS

Clutch

- Unevenly tensioned clutch springs
- Warped pressure plate
- Bent clutch plate
- Swollen friction plate
- Bent clutch push rod
- Broken clutch boss
- Burnt primary driven gear bushing
- Match marks not aligned

Engine oil

- Incorrect oil level
- Incorrect oil viscosity (high)
- Deteriorated oil

OVERHEATING**ENGINE****Cylinder head(s) and piston(s)**

- Heavy carbon buildup

Engine oil

- Incorrect oil level
- Incorrect oil viscosity
- Inferior oil quality

COOLING SYSTEM**Coolant**

- Low coolant level

Radiator

- Damaged or leaking radiator
- Faulty radiator cap
- Bent or damaged radiator fin

Water pump

- Damaged or faulty water pump
- Thermostat
- Thermostat stays closed
- Oil cooler
- Clogged or damaged oil cooler
- Hose(s) and pipe(s)
- Damaged hose
- Improperly connected hose
- Damaged pipe
- Improperly connected pipe

FUEL SYSTEM**Throttle body (-ies)**

- Damaged or loose throttle body joint

Air filter

- Clogged air filter element

UNSTABLE HANDLING

Handlebars

- Bent or improperly installed right handlebar
- Bent or improperly installed left handlebar

Steering head components

- Improperly installed upper bracket
- Improperly installed lower bracket (improperly tightened ring nut)
- Bent steering stem
- Damaged ball bearing or bearing race

Front fork leg(s)

- Uneven oil levels (both front fork legs)
- Unevenly tensioned fork spring (both front fork legs)
- Broken fork spring
- Bent or damaged inner tube
- Bent or damaged outer tube

Swingarm

- Worn bearing or bushing
- Bent or damaged swingarm

Rear shock absorber assembly(-ies)

- Faulty rear shock absorber spring
- Leaking oil or gas

Tire(s)

- Uneven tire pressures (front and rear)
- Incorrect tire pressure
- Uneven tire wear

Wheel(s)

- Incorrect wheel balance
- Deformed cast wheel
- Damaged wheel bearing
- Bent or loose wheel axle
- Excessive wheel runout

Frame

- Bent frame
- Damaged steering head pipe
- Improperly installed bearing race

EAS00866

FAULTY LIGHTING OR SIGNALING SYSTEM**HEADLIGHT DOES NOT COME ON**

- Wrong headlight bulb
- Too many electrical accessories
- Hard charging
- Incorrect connection
- Improperly grounded circuit
- Poor contacts (main switch)
- Burnt-out headlight bulb
- Faulty headlight relay (on/off)

HEADLIGHT BULB BURNT OUT

- Wrong headlight bulb
- Faulty battery
- Faulty rectifier/regulator
- Improperly grounded circuit
- Faulty main switch
- Headlight bulb life expired

TAIL/BRAKE LIGHT DOES NOT COME ON

- Too many electrical accessories
- Incorrect connection

TAIL/BRAKE LIGHT BULB BURNT OUT

- Faulty battery
- Incorrectly adjusted rear brake light switch

TURN SIGNAL DOES NOT COME ON

- Faulty turn signal switch
- Faulty turn signal relay
- Burnt-out turn signal bulb
- Incorrect connection
- Damaged or faulty wire harness
- Improperly grounded circuit
- Faulty battery
- Blown, damaged or incorrect fuse

TURN SIGNAL BLINKS SLOWLY

- Faulty turn signal relay
- Faulty main switch
- Faulty turn signal switch
- Incorrect turn signal bulb

TURN SIGNAL REMAINS LIT

- Faulty turn signal relay
- Burnt-out turn signal bulb

TURN SIGNAL BLINKS QUICKLY

- Incorrect turn signal bulb
- Faulty turn signal relay
- Burnt-out turn signal bulb

HORN DOES NOT SOUND

- Improperly adjusted horn
- Damaged or faulty horn
- Faulty main switch
- Faulty horn switch
- Faulty battery
- Blown, damaged or incorrect fuse
- Faulty wire harness
